DIGITAL TIPS

1 PRIVACY

Stay safe online! Remember to always log out of your social media, retail account, and emails when not in use. Protect your privacy and secure your data, pay attention to privacy. You must be careful when you allow applications (mic, camera, location tracking, contacts)

2 HACKER

stay alert! Fake social profiles can be a hacker's gateway to your personal info protected now. you shouldn't open links from people you don't know, because you will be vulnerable to hacking, be careful about what you post on social media don't publish information that contains sensitive personal details.

3 PASSWORD

Level up your security, create a rock-solid password by including numbers, special characters, and making it 16 characters long, Enable 2-step verification (2SV) it will keep your accounts safe and secure, don't use same password for all of your social media accounts.

4 DOWNLOADED

Remember, always double-check before hitting that download button. Be cautious of suspicious app or untrusted sites to keep your device secure, when it comes to online transaction, ensuring the security and reliability of the websites you visit is paramount. One crucial element to look out for is the SSL/security certificate. Websites that start with "HTTPS" rather than "HTTP" are encrypted and secure-the added "S" represents a safe connection. Additionally, keep an eye out for the padlock icon in the address bar, indicating a secure website.

5 CONNECTION

Protect your online privacy, stay safe and secure by avoiding sharing personal details over unsecured network. Your security matters, To increase your level of security, you must use a VPN, We also advise you to use a virtual private network.
