Introduction

For first time I had to face to work work group of people on project that no one of us had in the past. The challenge to work together and stand behind information and long research about if THE technology are good for elderly population. And YES that is what I am going to have at this support paper evidence from my research and reflection on what my group did to stand behind that the technology are necessarily for the elder population.

STANDING POINT IN DEBATE

I had to do my research on that to be able to define the Topic. I was responsible at this debate to make sure that every one understood the topic and for everything is crystal-clear how the next few minutes will be used to give our evidence for support the standing point of group A.

OTHERS VIEW ON THE DEBATE

All members from group A had specific topic to be covering. The time time we had we had introduction to the topic, arguments of how the technology are useful for the elderly population. Tree of the members had the important part to present the different type of technology how are they use, and how they effect the life of one old and vulnerable human.

REFLECTION ON THE INFORMATION PROVIDED

According to all the information that have been give I will stop at this support paper on the most important that have kept the oudiens entrusted to the topic that my group provide.

Based on research the population of UK is 66.33 million people.12 million of this number are population from age 65 and above. (ONS, 2021)

Definition of old person can not be specified as, one 75 years old person can be healthier than 65 years old.

According, to NHS someone over the age of 65 might be considered an older person. (NHS, 2022)

What technology is? Technology may refer to a piece of equipment, equipment that might be either very basic or can be used only by professional stuff.

However, the innovation of the technology impacts the ideals of a society, which brings both a challenge and an opportunity to use technology morally and for justice.

The different types of technology have been provided such us:

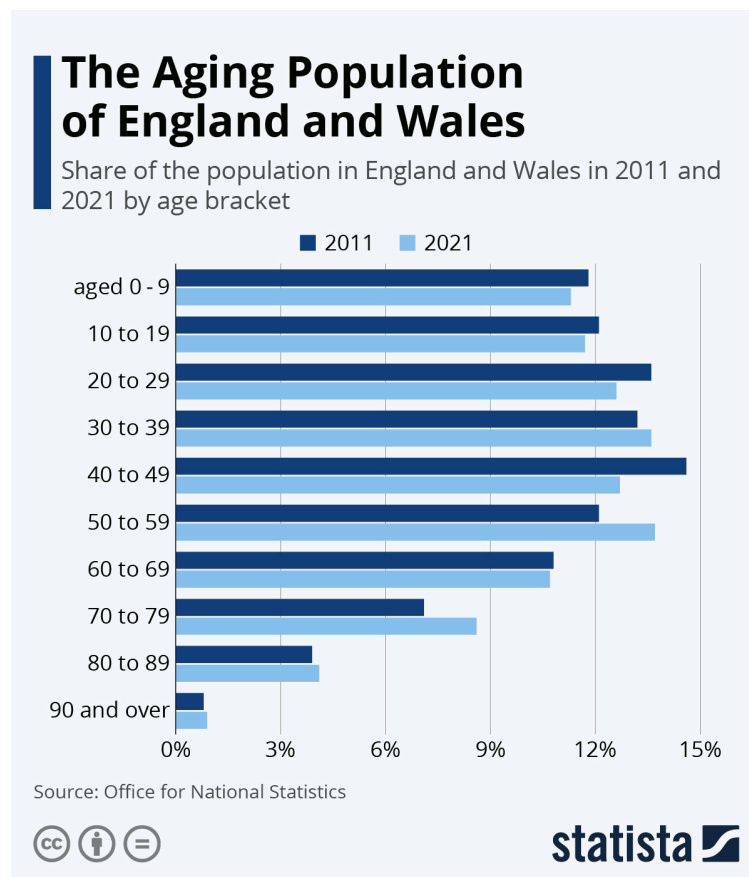

- Information technology (IT)
- Biotechnology
- Communication technology
- Nuclear technology
- Medical technology
- Electrical technology
- Mechanical technology. (Indeed, 2022)

The debate give us opportunity to explore few of this types of technology and how the are connected to one older person in 2022.

Everything leaded as of that the technology is life sporting innovation that the human bild for that long person of time. We started with simple phones to machine that support for base life needs and not the last the robot and what can do for elderly population.

UK POPULATION (Statistics)

Earlier I mention the the elderly population is 12 million of people. Aged 65 and above in the UK of which: 5.4 million people are aged 75+, 1.6 million are aged 85+, Over 500,000 people are 90+ and 14,430 are centenarians. • According, to Office for national statics The number of centenarians living in the UK has increased 85% in the past 15 years (ONS, 2021)

SUPPORT FOR ELDERLY POPULATION

Age UK, provide support for elderly. The aim is to provide life-enhancing services and vital support to people in later life.

(Age UK, 2022) provide many way of support. The organisation have 130 locations.

They provide different services in different areas.

Services such us:

- Cafes and Restaurants
- Day centres
- IT training courses
- Home Help
- Local activities, n.t. (AgeUK,2022)

According, to NHS. Elderly population is support to age well.

(NHS, 2022) Will always have something to be improved.

- Long term condition to be prevented
- Identified and managed alongside other long term conditions
- Reduce the amount of time someone spends in long term ill health in later life
- Supporting public services to work together to support people.
- Identify and support implementation of best practice interventions for key stages of frailty
- Promote proactive frailty case finding (identifying people at risk of frailty). (NHS,2022)

COVID -19 pandemic older person, and relevant services

According, to what the governments are doing shows in the research that I did. And that is how the elderly people where supported during this bad times for every one off as. "The report looks at how the wider impacts of COVID-19 have affected older people (65 years and over), with a focus upon reconditioning and falls. Estimates of the impacts on physical activity levels and rates of falls in older people are provided. The report also summarises recommendations aimed at mitigating these impacts and to improve older adult mental and physical health." (GOV.UK, 2021)

CONCLUSION

To conclude, the impact and the necessity of technology for elder people are important. From all the evidence. Research are showing huge progress of how the elderly are involved into technology even services dealing with elderly population are offering IT trainings specially when COVID-19 introduce to the world population.
