Saba Humayun

Website link;

<https://sabahumayun.com/>

The link for my website, that will take you to my profile page which I have set a category to see my work,

The website is about me and my work and experience in photography career you will find different portfolio for the work I have done in the past, the blog and the stuff I am still working on.

I recently created the website for the first time in my life for the university assignment and I think I was never ready for that, because I always thought making an website is always a waste as we can show our work through different social media platform and that only happen from this year when I got the university assignment to see the change in my life and what new things I just got a chance to discover I am overwelled and happy that I finally made my website and made a choice to create with WordPress.

WordPress is a web content management system. It was originally created as a tool to publish blogs but has evolved to support publishing other web content, including more traditional websites, mailing lists and Internet forum, media galleries, membership sites, learning management systems and online stores. Wordpress gives platform for people to set a profile and connect with others to have a better platform

I have seen another different website to create my website such as, SITE123, WIC.COM, HOSTINGER, CANVA etc. And many more.

But WordPress is simple and easy to start up with, also I connect with Hostinger website to buy the yearly domain where it let me host and edit, my website to be in the public sector where people can go to my website and explore things about me.

Hostinger has a very good deal to buy website which shows the different deals to buy the domain either monthly and yearly as well as with different currency and I bought my domain for 1 year which give me option to promote my website for my work and projects so I can use my university work and professional work to promote my business.

I can sell my stuff, like clothing brand, or offers for wedding and business shoot.

Substantially website gives perfect sense for people who are looking to develop their work into the wider place, and I think creating a website with WordPress. Com. It's a good start to create a bio about yourself and show the experience and portfolio of the work, it's easy to access and you can advertise for the brand you want to create in the future, and it will help to boost your confidence to show your work publicly and connect you more with social media.

However, creating a website gave me a new platform to make an interaction with different people they got to see my website and other social media such as Facebook, Instagram, LinkedIn, Vero, and many more...

I have added all my profile account where people can contact me and find the information if they need to work with me or hire me for my photography shoot or documentary and through the time I will learn and explore about other websites to promote my work into a bigger platform in the future.
