

AUTISM: A DIFFERENT ABILITY

This tv show provides information on autism, its effects and interventions used by professionals. According to World Health Organisation, one in 160 children worldwide has an autism spectrum disorder (ASD) (WHO, 2021). Research has also shown that parents of autistic children face higher stress levels (Brobst, Clopton, & Hendrick, 2009; Solomon and Chung, 2012). Families struggle to understand the disorder and how to help their children. These families require extra professional engagement and awareness (Gentles, 2020). This tv show aims to introduce people to autism, explain how these children see and comprehend the world and how they can be helped.

EPISODE:1 WHAT IS AUTISM

ASD is a neurological disorder that impacts brain development (Bumin et al., 2015). This episode will explore the effects on behaviour and skills.

EPISODE:2 SENSORY

The sensory issue is when the sensory information is not embedded in the brain, resulting in various development issues (Miller et al., 2007). This episode will look into different sensory-based interventions used by professionals.

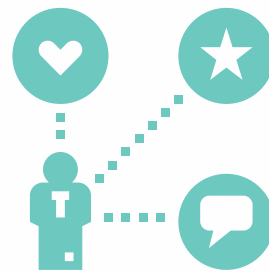

EPISODE:3 SPEECH AND LANGUAGE

Try to make associations between the process described in the problem and the applied scientific principles. In time, you will begin to see the same patterns over and over.

EPISODE: 4 SOCIAL SKILLS

People with ASD may have challenging social behaviour (Frye, 2018). In this episode, professionals will discuss ways to support children to develop social skills.

EPISODE:5 THERAPIES

This episode will present what types of therapies are available and can help children from the early years of their diagnosis.
