

Research Participation Log 2017/2018

Level 4 Research
Methods (ECPS4001)

Study One Study Code: Swan_credit_AB

Study Code: Swan_credit_AB

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☒

No ☐

If not, which guidelines were not followed?

Describe how the ethical guideline were followed?

The researcher introduced herself and warned me about the sensitivity of the study. The researcher explained that I had the option and the right to withdraw at any time during or after the study. I signed a consent form which I placed in a folder while the researcher stepped outside, I was told that was for confidentiality. After the study I placed my completed questionnaire into a different folder, for confidentiality.

Note:

This image shows a single page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or other markings on the paper.

How were you fully debriefed after completing the study? Were you provided with details of the researcher (e.g. email address) and given the opportunity to discuss with them after completion?

I was provided with their contact details, which appeared on the screen once I had completed.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

This study could have been done in a lab setting due to the nature of the study, I knew people could see my answers, this could impact the truth of my answers, whereas in a lab setting which is secure I possibly would have given a more accurate reflection of my beliefs.

Name (PRINT): Rebecca Harding

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

I was asked to complete two questionnaires about sudden infant death syndrome. I understood the purpose of the study was to test my knowledge about the syndrome and its causes.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

My experience of taking part in the study was a positive one although sensitive. The questions and instructions were clear and easy to follow.

How were you fully debriefed after completing the study? Were you given opportunity to discuss with the researcher after completion?

After I had completed, the researcher then handed me a debrief form with all their contact details on it, and a full description of how to withdraw my information, this gave me an opportunity to discuss with the researcher and ask any questions regarding the study I just took part in.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

I did feel during the study, although the questions were clear, some of them were very similar and I could not see the purpose of.

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

I had to give my opinion of legal immigrants on scale from strongly agree to strongly disagree, over a six page questionnaire.

Briefly describe your experience of taking part in an online research study and how this experience differed from a lab based study (positive aspects/issues that may have impacted your participation)

The study was online, I did this study in a library which was my choice, I fully understood that this was a public setting which and that my answers could be seen by anyone, which did impact experience of the study.

Online Study Study Code: Swan_credit_TB1_online

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☒ No ☐

If not, which guidelines were not followed?

Describe how the ethical guideline were followed?

I had to read the consent form on the screen which made it clear that it was a voluntary study and that all information remained anonymous, I then had to click confirm. I was asked geographical questions. I then had to read and confirm I had read my rights to withdraw and given contact information.

Note:

This image shows a single page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or other markings on the paper.

Study Two Study Code: Swan_Credit_GH

Study Code: Swan_Credit_GH

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☒

No ☐

If not, which guidelines were not followed?

Describe how the ethical guideline were followed?

I was given a consent form and the researcher introduced herself, I signed the consent form which was placed into a folder, so I could not be identified with the results given. The researcher also told me I had the right to withdraw at any point.

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

I participated in two questionnaires where I had to agree or disagree with given statements on the questionnaires.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

Although this study was a brief and a quick to complete, the design of the questionnaires, were simple and easy to follow, and I knew what was being asked of me.

How were you fully debriefed after completing the study? Were you given opportunity to discuss with the researcher after completion?

I was given a debrief form with all contact details on it and explained that I had the right to withdraw from the study at anytime.

Are there any areas of improvement for this research study?
(think about the materials used in the study and how the researcher carried out the study)

Although the overall design of the questionnaire was easy to follow, I didn't fully understand one of the questions and I wasn't fully sure what was being asked of me, perhaps in future studies that question could be reworded, for a more accurate result.

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

This image shows a blank sheet of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page. There is a vertical margin line on the left side, creating a narrow left margin. The paper appears to be from a notebook or a standard writing template.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)
