Synthesis of academic sources

both sources focus on digital education the differences are that one focuses more on the challenges and opportunities the digital era experiences and the other one focuses more on the student's perspective.

One section in which I found that the sources differ is that the first source states that the digital learning is not appropriate for practical sessions and that is It is useless to just have the knowledge and move it around randomly and the other source in the student's perspective article states that Digital education does improve practical abilities by providing interactive content, easy access to resources, and opportunities for hands on activities through smartphones, websites, and platforms.

Identify a key challenge and a key opportunity

one key challenge

is Lack of teacher–student direct interactions: It is simple to misjudge the amount of teacher contact students that receive at university. This segment, which includes question-and-answer sitting, comes next. There is a chance for debate right before and after learning, during office hours, and chance interactions in the hallway. These are not available for digital education.

One key opportunity

Anywhere and anytime: it is a blessing to have the opportunity to be able to join the class from anywhere it makes it a lot easier to juggling work, study, and social.
