FINAL GRADE

58/100

GENERAL COMMENTS

The submission shows a reasonable understanding of the game project, with some evidence of your contribution and reflection on the team process. However, the presentation would benefit from a more professional structure and clearer visual support.

More detailed evidence of your own practical work, mechanics and development process would strengthen the hand-in. While some reflection is present, further discussion of solutions used, or possible solutions to challenges faced, would improve the submission.
