Virtual Learning Environment How does it work and all the advantages and disadvantages for studying online and what are the best platforms for VLE

There is no doubt that nowadays technologies are excessively big part of our life work style and everyone by now has laptop tablet or phone to use in his daily routine is either for work or for personal entertainment etc. Many platforms have been resiled since the internet and the technologies become constant part of people's life's of course the big names like Facebook and Instagram are proof that social media it takes big part of the internet and web life, however internet can be extremely useful place to learn and explore and that is why a lot of people find learning and studying online very convenient for them. A lot universities relies on this kind of platforms and education programs online so they can be open for everyone who wants to study at their institution.

Virtual Learning Environment is one the most preferred way for students to learn and it is considered as extremely useful tool in their life routine because some people have personal reasons or simply, they do not have the time to go in campus and study. However, education does not come with qualifications but only a proof of your studies in a form of Certificate or Diploma some people need to have specific qualification at the career they choose if they have not got any previous experience the only way of getting the needed qualifications is to sign up for a course and now days there is thousands of online courses where can quickly be qualified most of them are free and they do not take a lot of time to be complied where is if you have to go in person to and start this course it takes more time then joining online

The three different types of virtual learning environment are: fully virtual classroom and education process the other one is asynchronous online course or education process students have the flexibility to join the class whenever they want and leave as well and the last one is rotation model or blending learning this virtual process of learning students to split their time and attend class at

campus as well, This opens many possibilities for students and it gives them a chance to choose what is suitable for their education.

The Strategies for Effective Teaching and Learning number one priority is to have good communication with students the teacher must really be clear for students and help them with any concerns. Also, it is really important for the teacher to be able to set expectations and goals for their students while learning that really makes a massive impact on the student and their thinking and sometimes even to help them figure out what to do after finishing studies. Setting up routine is also really good way of achieving results for example being more organised with your academic schedule all assignments you and calendar with all important dates of exams and lectures. Extremely important is also to have safety online and cyber knowledge therefore to know how to use and work with platforms and use internet safely with them. Giving feedback is also really essential skill that is needed based on the feedback giving the student can improve in certain category or it can be award for the good job here come the stimulating of the student teacher need to be able to motivate and stimulate the student in any occasion so the student can see all positive advantages of the virtual learning environment.

One of the most popular platforms for online education is called Ed App which is winning- award microlearning platform it allows you to use it not only for educational purpose but also for work and training. Grammarly is another platform for learning especially for students helps them to Improve their writing corrects spelling and helps with grammar and punctuation the best feature on this app is that works with any other apps or social medias and it is free to download and use. The whole environment has quickly become a success with a lot of possibilities and advantages. Other platforms such as LearnWorlds is designed to personalized your own learning experience especially created for employees thought course player templates eBooks and social media community also you learn about video creating another good example is Wooclap allows learners to take lessons quizzes surveys and submit their homework it also helps to do analysis and explore results to PDF or Excel. There is also many software's that are suitable for virtual learning.

One of the main advantages of usage is how much time people can save during the educational process also from financial side is a lot more affordable for example platforms like New Skills academy gives a chance to people to get their needed qualification and is affordable for them the courses they offer are thousands different categories and spheres also there is option to split your course on parts so it be much easier to complete after completing the course the student receives their certificate or diploma by the post. The other good part of the virtual learning environment is how accessible and easy is for everyone to use and understand. The most important advantage of the whole thing is that it gives anyone a chance to either continue with their education and therefore have better future as well as it helps to develop a personal skills and it gives a lot of knowledge about the chosen subject or the career path

However, there is disadvantages about the whole learning process and environment a lot of people struggle with self-discipline which is extremely important for the learning processes and for the academic future of the student. Isolation can be really difficult as well for some students and they often allow to get distract from learning a long with all of these factors is also technology issues which sometimes you cannot avoid and this might cost the student failing. The end of the day of course this is personal choice and if you choose to study or to develop your skills and get qualification it is personal responsibility to stay focus and make sure you pass through everything and stay motivated. Personally, for me motivation is one of the things that made me continue with my education so one day I can have the life and the career I want so I definitely think that education is important and is never too late to take a chance and continue your studies or even improve skills

you already have with just an online course and then having this convince of achieving something will be one of the awards of this made decision.

A of universities or other educational institution offer their online education program so it gives chance to anyone to join at the university even there is variety of part time and full-time courses which is just one more of the advantages that this environment offers there is many different programs as well for people with disabilities or ussies with learning that have special learning needs.

One the other hand this sphere of education has become really successful in training and improvement of the quality business many employees use platforms to educate their workers and to improve quality of work process.

Education can be seen everywhere in any shape and form is either in college school or even games such a chest which is one of the most entertaining and strategic game which involves the power of thinking, as well a lot more board games that stimulate the brain and at the same time you learn something new which in my opinion is important and it unlocks the curiosity in the person and invites to learn more and more. One of my favourite games to stimulate the brain is world snack and is about words and personally I have learned a lot of different worlds that I have never heard before and it is really interesting.

This environment has massive impact of the students now days more students seem to find virtual learning environment more interesting and the amount of people who attend online learning is more than the ones attending campuses because for more students is convenient to study online rather then in campus and it safes more time. Statistic says that over 6 million students have decided to pursue online degree and more and more joining them every day,68% of online students are experienced professionals, the average age of online students is 32 years old most of them continue with their education 54% of the students are part time, the graduated students are twice likely to earn online degree. The online institutions maintain low number of professors that is basically more students then teachers this industry grows every single days and more people are joining the environment this proofs that a lot of people care about their education and future some of them are really young and wants to have better life and career the middle age students wants to achieve certain goal or for example to get promoted at work or even start their own business but most of the time the degree is really necessary but having a degree is not just piece of paper it gives you a lot more after you revising it you are getting the knowledge and the experience of learning new things and useful information for your future or even for your own personal needs. Some studies actually shows that people are not only sign up for degree just because they need degree for their work or something but just because education is really important to them to have even if they don't use it having to learn something and to have knowledge about things that are interesting to you personally is sometimes more important then everything else some people are looking to have the dre3am career and that's why they deciding to join virtual learning environment so that it be beneficial for them and not only that but also to sort of challenging them self to achieve more and more and to be more and more successful because many people are just born to be

It is conclusive that internet and technology are powerful tools and now days we all take advantage of them for almost everything in our life routines, but it is important to use them in a way that helps us and improve our personal skills and knowledge. The variety of possibilities is endless, and this environment can be also really successful career and great opportunity especially for young people who want to become a teacher's volunteers or any other career that involves training and education. There are many successful people as an example list is endless Barak Obama and his wife Michelle, Mark Zuckerberg, Bill Gates etc the one common thing about all of this people is they graduate on

of the most prestige universities in the world Harvard they are all successful in their own type of way and it only shows how being educate is one of the most prestige things now days to have education is just extremely important and it is necessary even if you are applying for job on of the requirements is to have any form of education and if you are not is most likely that you won't be successful candidate, so being educated is one step of being successful.
