

close any information that they may have interacted with by mistake. It will then place them back where they were meaning no additional ~~scrolling~~ ^{scrolling} or backtracking to find where they were. It also provides responsibility by removing all of the darkening of all elements instantly when the user closes out of what they were focused on. The utilization of these fundamental design principles is effective due to the simplicity of the interface where alongside the audio application to help users find objects or be notified of objects they may have scrolled past. There is also great utilization of visual elements where colour, pop-up boxes are used which give a brief run down of artifact information where it is then at the users own discretion where they can enlarge it and learn more. ~~Vibrant~~ Vibrant colouring is also used to differentiate the artifacts where America is red, while Europe is ~~blue~~ blue therefore locating content is much easier. Using the Wave (web accessibility evaluation tool) this exhibit had 3 errors, one with language ~~was~~ missing meaning that screen readers may not be able to pick up on or miss some content in the exhibit. It also had two missing link errors meaning that this could cause confusion for keyboard and screen reader users.
