**Subject: Font
Size**

Font Size

. Font size is important because it plays a big role in the readability and overall success of your presentation.

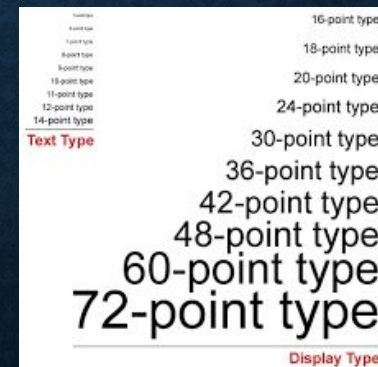

. Presentation are projected for groups, and must be readable by those in the back of the room.

. The font you choose must be readable to your audience, after you've chosen a font, you should always keep it larger than 18.

. Make Sure you have the same font for every slide.

The disadvantage of not using font size is

- 1) People may not be able to read the work
- 2) Some people can get eye strain

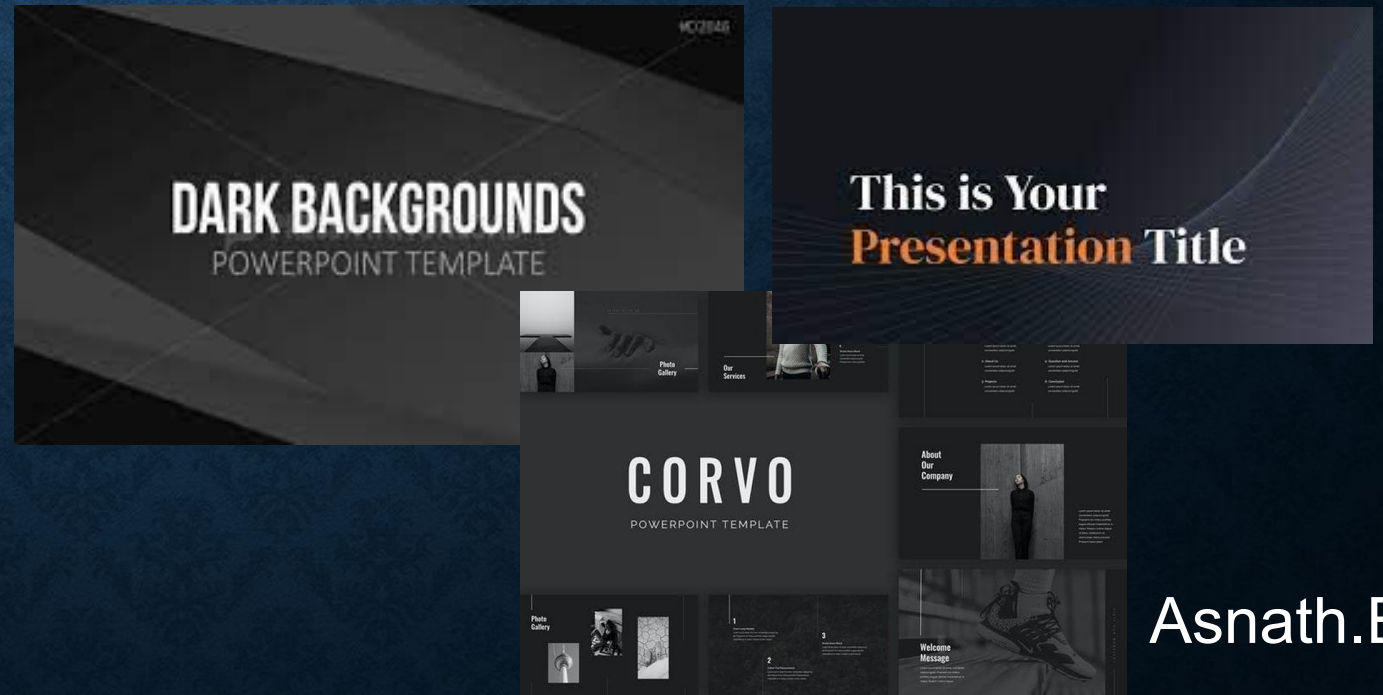

Dark Background Works Best

.Ideally all your writing should appear on dark backgrounds, well most of the times.

.The dark background gives good emotional feelings as the predominant color on the screen.

. It makes the words more outstanding.

**Subject: Working
Memory**

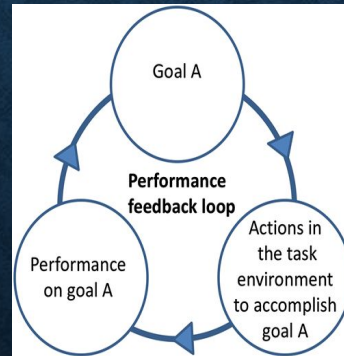

WORKING MEMORY

- Working memory helps with :
 1. to process and manage information more easily visually.
 2. it helps us process and achieve task instructions and goals.

1.

2.

**Subject: One
Simple Slide**

ONE Simple Slide

- The key to a good PowerPoint slide is to have a single message, because it will impress your audience if this will contain the following aspects:
 1. To be Comprehensive
 2. To be Legible
- these are some of the things you can easily impress your audience with.

Thank you!

Thank you so much for taking your time to watch this presentation and i hope you enjoyed it.

Any questions that you would like to ask please email us with the emails provided on each slide.

Thank you
