CASE STUDY - FAMILY E

The issues considered were domestic violence, verbal and emotional abuse of the children by their father, the children's non-attendance at school, concerns around the mother's possible alcoholism and the anti-social behaviour of the two boys.

The two boys, one of primary school age and one of secondary school age, were living with their mother at the time.

INTRODUCTION

4

- Abuse or violence committed inside a domestic relationship, such as a marriage or cohabitation, is known as domestic violence.
- Abuse may be either direct or indirect, and can manifest in many ways, including but not limited to those listed above (Richard *et al.*, 2015).
- Domestic homicide may include anybody in the household ,even if they don't live together.

RISK FACTORS

Adult	Children
Domestic Violence	Domestic Violence
Possible alcoholism of the mother	Verbal and emotional abuse by father
Challenges in addressing the family's issues	Non-attendance at school
	Anti-social behaviour

IMPLICATIONS

.Verbal and emotional abuse refers to a recurring cycle of interaction between the child and one or more caregivers , resulting in emotional and psychological harm to the child(Momtax et al,2022)

1.Limitating emotional abilities

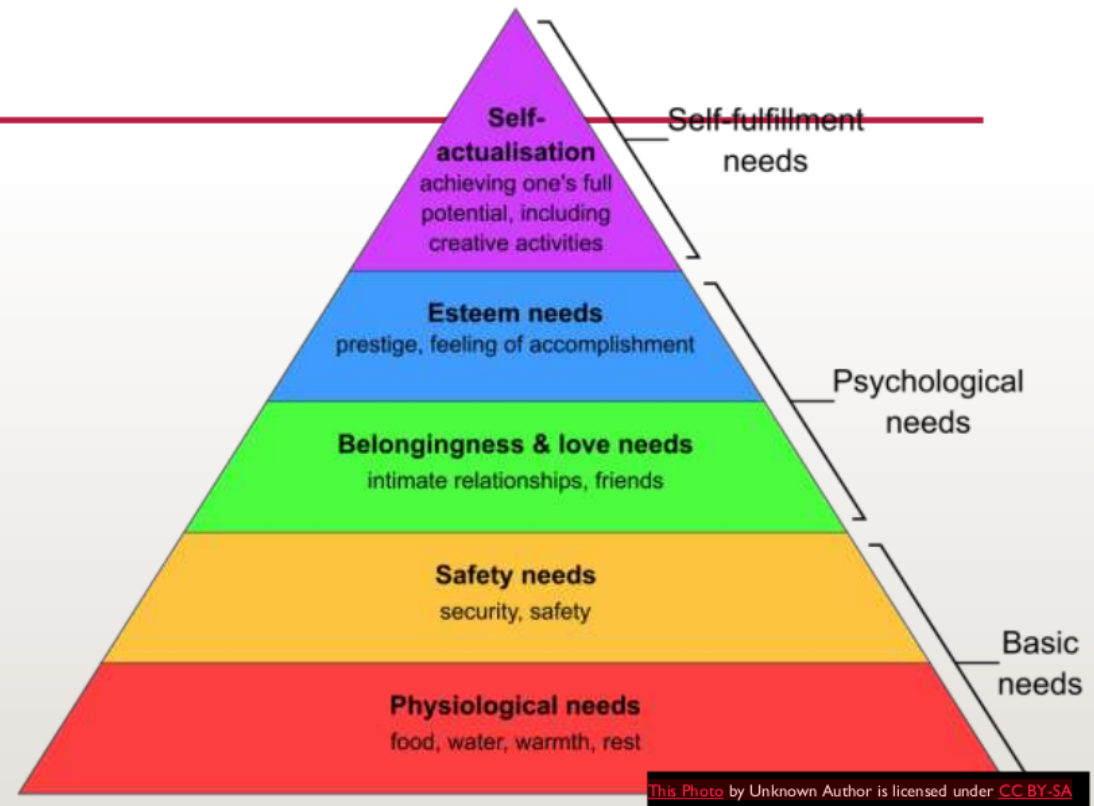

2.Changing behavioural patterns

3.Educational challenges

4.Increase risk of mental health

5.Physical health consequences

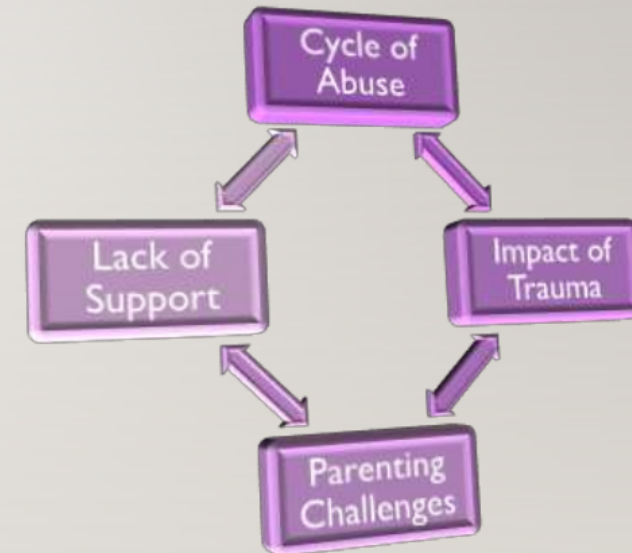

6.Development delays .(Spinazzola et al.2021)

IMPACTS ON PARENTS

7

- Domestic violence cycle and emotional abuse may make it hard for mothers to leave abusive relationships for reasons like fear, financial reliance, low esteem and lack of support.
- Trauma and other stresses on parents might lead to coping methods and isolation.
- It is important to seek professional assistance, intervention, and support in order to resolve the difficulties and guarantee the safety of all family members.(Brown, 2013).

SERVICES TO BE INVOLVED IN THE CASE

8

Child Protection Services

Mental Health Services

Education Services

Community and Support Groups

Substance Abuse Treatment Services

MEASURES TO IMPROVE THE WELLBEING OF THE FAMILY

9

Educational Support

Child Protection Measures

Safety Assessment and Protection

Parenting Support and Education

Individual and Family Therapy

MEASURES TO IMPROVE THE WELLBEING OF THE FAMILY (CONT'D)

10

- Providing access to substance abuse treatment services, collaborating with school personnel to address non-attendance at school, offering parenting support programs, and connecting the family with resources.
- In light of the fact that every family's predicament is different, it's crucial that solutions be adapted to each individual set of needs (Tetreault, 2020).

RECOMMENDATIONS FOR THE PARENTS

- The most crucial steps are for the woman to create a safety plan to secure the immediate safety of herself and her children, to seek counseling and support, legal aid, treatment for drug misuse, and to give access to parenting education and support (Cocozza ,2018).
- Restraining orders , child custody applications and other legal processes may all be investigated with the help of an attorney.
- The mother may benefit from parenting education and assistance by learning new techniques ,reconnecting with her children , and overcoming any destructive habits she may have developed in the past(Grieson,2018)

RECOMMENDATIONS FOR THE CHILDREN

12

- Involving children in support groups or counseling sessions with peers who have experienced similar situations, creating a safe environment, offering trauma-informed counseling services, providing educational support tailored to the specific needs of each child, encouraging participation in extracurricular activities, sports, or community programs, and so on are all good places to start (Oppenheim, 2018).

RECOMMENDATIONS FOR THE CHILDREN (CONT'D)

13

- Children needs to be treated with compassion, understanding, and acceptance, since their paths to recovery will be different.
- Working together with experts from different fields may give a holistic strategy for helping the entire family (McVeigh, 2015).

SAFEGUARDING

“Safeguarding is the action that is used to promote the health and well-being of vulnerable adults and children ,and to keep them safe from any harm “(Learning . nspcc.org.uk). In terms of safeguarding , we should protect children and vulnerable adults from any form of abuse or maltreatment and protect their development and health.” The six principles of safeguarding is to empower, prevent, protect , proportion ,partnerships and accountability”(Virtual-college.co.uk)

When it comes to the case study , the mother and the children ’s safeguarding needs to be taken into account especially if there is a situation of domestic violence and abuse that is being shown towards the children which can contribute to their anti-social behaviour already hindering their health , wellbeing and development.

15 CONCLUSION

- Domestic homicide is a form of violence committed within a domestic relationship , including marriage or cohabitation . Risks factors for adult include domestic violence, possible alcoholism and family issues . Children may suffer from physical from physical and psychological abuse , leading to poor academic performance , social and behaviour issues , and a loss of peer connections and social integration.
- Parents may struggle to leave abusive relationships due to fear of financial dependence ,low self-esteem ,and of lack of support .

16 CONCLUSION(CONT'D)

- The case study requires involvement of education , mental health ,community support groups , and substance abuse treatment services . Professional social workers can evaluate situations , provide advice and link families with support services .
- The woman should be encouraged to create safety plan , seek counselling and support , seek legal aid , seek drug misuse treatment ,and provide access to parenting education and support.
- An attorney can investigate legal processes while parenting education can help mother reconnect with her children to prevent destructive habits.

17 CONCLUSION(CONT'D)

- Stability measures for abuse and neglected children include support groups , creating a safe environment ,offering trauma services, providing educational support , and encouraging participation in extracurricular activities .Working with experts from various fields can provide a holistic strategy for the entire family.
