

MODULE REVIEW MODULE TUTOR - REPORT FORM

The review of a module is carried out initially by the Module Tutor. When the module review is completed, its findings are considered by the Head of School or Programme Director and noted at the School's Annual Programme Review. Module feedback and what changes will be made as a result of the feedback given are also discussed at Staff Student Consultative meetings. This form is not compulsory but is provided to support the module review process.

Academic Session: Computing and Information Systems
Module Title: Socket Programming and Concurrency
Module Code: ACCA6028

Student Feedback

Number of students registered and eligible to complete the questionnaire: 7

Number of returns: 6

The majority of students found the module intellectually stimulating, well taught, clearly structured and interesting. Similarly, accessibility of unit information, staff and guidance were all highlighted as areas of strength.

Nearly all relevant feedback was recorded against "Definitely Agree" or "Mostly Agree".

Some use of N/A in response to feedback quality, timeliness etc. This was due to the close proximity of the questionnaire being set after the assignment deadline leaving no time for marking and feedback in the interim.

Module Tutor's response to feedback given by students

This unit is fun. The students may have been a little intimidated initially but have grown in confidence and developed into programmer capable of tackling what is a very complex subject. I understand the lack of commitment over marking and feedback. I am reviewing these comments only 4 days after the assignment deadline, so these marks are entirely understandable.

Tutor Self-Reflection

The students all seemed to enjoy the unit, the examples, and the assessment project. They were all reasonably relaxed during their project development phase requiring little to no assistance with their code. This unit has gone very smoothly this year!
