

BASIC ONLINE SAFETY

WITHIN MINUTES

The use of strong passwords can be very helpful. Avoid using your birthdate or name.

When possible the usage of a two-factor authenticator app can be a suitable other than the password, to ensure secure access.

Regularly update your software on your device to ensure your device is updated and secured. It is also a second form of verification.

Be ware of unsolicited emails and links, always verify the links and emails before responding. Especially those that ask for your personal information.

Avoid the usage of public Wi-Fi for activities such as online banking. In use of public Wi-Fi do ensure to have VPN installed on your device.

Beware of what you share online especially personal information. Have second thoughts of what you share online also on social media platforms.
