

How to create a chart in Excel in 6 steps

In this simple guide i will be showing you how to create a chart in Excel and why i think it is the best to use in my opinion.

1. First search Excel and open it logging into your account.

2. Once in the app create a blank workbook and put in your information that you want to put in Excel.

	A	B	C
1	January	1	
2	February	2	
3	March	6	
4	April	9	
5	May	4	
6	June	7	
7	July	5	
8			
9			

3. Go on insert to be able to create your chart.

5. Select one of the charts that you want. (e.g. Bar chart, column chart, line chart, pie chart, scatter chart, area chart, statistical chart and more.).

Choosing the right chart that you may need enhances your data interpretation and presentation .

6. After selecting the chart you think is best fitted you have your chart ready for presenting it or whatever you need it for.

In summery i think that Excel is one of the best to use for charts because it is easy for use and fast so you don't have to do a lot of work.
