Impacts of modern technology introduced

The organization can verify quickly how many clients are attendant of the homes.

Using the data system which is CM2000 helps careers /clients to have their care assessment in the home.

More awareness, easier, there's information of careers attendant by accessing daily information.

Now careers can find clients addresses more easily through google map and CM2000.

Lessons drawn from the case studied -

Trinity Saint David

Lessons drawn of the case studied

Traditionally, records are done manually on paper. However, this results in individual files and it takes a lot of time to locate and pull.

It is more environmental friendly

It is easier to store and locate required data

Similar benefits of digital technology according to Anytime Care 2020 case study shows:

Storing records under client's number to allow for easy navigation.

Storing and assessing care plans electronically is easier and more time effective.

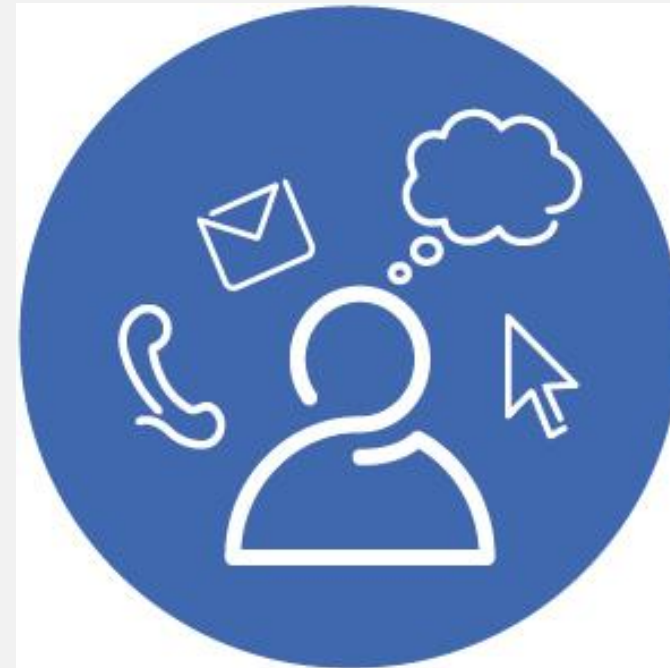

Health record are accessible in all branches allowing for transparency internally and promoting more effective collaboration between work colleagues

Carers can easily find clients addresses providing they have access and also use modern digital technology to navigate to the address such as google maps.

Lessons drawn of the case studied

- In a way modern technology has improved the way we care and treat people. Moreover, electronic medication management is put in place to help staff record medication given to clients under their care.
- This has minimised the probability of giving incorrect medication. As stated above, it can be said that modern digital technology is important to Anytime Care 2020 as it has helped them to access client's information easily and faster.

It can be concluded that without the invention and the introduction of the modern digital technology in this organisation, they would be obsolete. The application of modern digital technology led to:

- An effective and better customer service
- Increase productive time.
- Secured and accessible information.
- Enhanced care treatment
