

AI-Assisted Research Activity

Name of the AI Research Tool:

Consensus AI

Type of Tool: AI-Powered Academic Research & Literature Review Tool

Purpose: Consensus AI is an Artificial Intelligence-based research tool designed to help students, researchers, educators, and professionals find and understand academic research more efficiently. It helps users search for relevant research papers, summarize important findings, compare evidence from different studies, and explore existing research on a particular topic.

Unlike general AI tools, Consensus AI is mainly focused on **academic and scientific research**. It connects AI-generated insights with research papers, making it easier for users to explore evidence and locate relevant academic sources.

Availability – Free / Paid / Cost:

Consensus AI is available in both **free and paid versions**. Students can start with the free version and upgrade to a paid plan if they need more advanced features.

Free plan:

- The free plan costs **\$0**.
- We can search for academic research papers without paying.
- It also gives limited access to some advanced AI features.
- Users get **3 Deep Reviews per month**.
- Users get **10 Study Snapshots per month**.
- I think the free plan is useful for students who mainly need basic research and want to try the tool before paying.

Paid Plan:

- The Pro plan costs **\$20 per month**.
- The yearly plan costs **\$144 per year**.
- It provides unlimited Pro messages.
- It includes **15 Deep Reviews per month**.
- It provides unlimited Study Snapshots.

Deep Plan:

- The Deep plan costs **\$65 per month**.
- The yearly plan costs **\$540 per year**.
- It includes the features available in the Pro plan.

- It provides up to **200 Deep Reviews per month**.
- This plan is more suitable for people who do research regularly and need advanced research features.

Ease of Use:

I would rate Consensus **4.5/5 for ease of use**.

It is relatively simple because we can type a research question in **normal language** instead of learning complicated search commands.

Step 1: Open Consensus AI.

Step 2: Enter a research question.

Step 3: Consensus searches academic research papers.

Step 4: Review the papers and AI-generated summary.

Step 5: Open the original papers and verify the information.

Effectiveness for Research:

I found Consensus AI quite useful for research because it helps me find and understand academic research in less time. Instead of searching for every paper separately, I can ask one question and get related research papers in one place.

- **Finding Research Papers – 5/5**
It helps me find research papers related to my topic quickly.
- **Literature Review – 5/5**
It is useful for understanding what different researchers have already said about a particular topic.
- **Understanding Complex Research – 5/5**
The summaries help me understand the main points of research papers more easily.
- **Finding Evidence – 5/5**
It can help me find research evidence to support a particular statement or idea.
- **Comparing Different Studies – 5/5**
We can look at different studies and understand whether their findings are similar or different.
- **Finding Research Gaps – 4/5**
By looking at different studies, we may identify areas where more research is still needed.
- **Writing an Assignment – 4/5**
It can help with collecting information and understanding sources, but I would not use it to directly write my complete assignment.

User Reviews / Feedback:

After looking at the feedback about Consensus AI, I found that people generally like it because it makes academic research easier and saves time.

Positive Feedback:

- It helps in finding research papers quickly.
- The interface is simple and easy to understand.
- It is useful for students who are doing assignments or research projects.
- The sources are provided along with the information, so we can check the original paper.
- It can make literature review work easier.
- It helps in understanding the main points of different research papers without spending too much time.

Negative Feedback :

- We should not completely depend on the AI-generated summary.
- For important information, it is better to open and read the original research paper.
- The free version has some limitations on advanced features.
- Since Consensus is mainly made for academic research, it may not be the best option for normal or general web searches.
