Academic and Employability Skills Task 1

Dionisie Andrei Tiron

Student number: 2130488

Lecturer name: Joanna Walsh

Table of Contents

Introduction

Task-1

- Discuss your inert and acquired skills pertaining to your field of interest
- Identify those requiring improvement for practically succeeding in the chosen field
- Demonstrate an understanding of that chosen field

Task-2

- Reflective Report

Conclusion

References

Introduction

The following module comprises of two core tasks.

The first task requires the formulation of an individual presentation that would be pictorially analysing my employability skills in relation to my specifically intended career line/ self-business.

The second task calls for the formulation of a core academic and self-reflective report for reflecting on my entire understanding of and learning from the following module.

What is a skill?

A skill refers to an act of expertise pertaining to any and every aspect-centric activity/mechanism supporting an individual's entire life (including their both personal and professional lives). The execution of majority of our daily-purpose motor and cognitive actions depends upon the inculcation of the basic survival skills, while the high-profile skills are employed in our respective fields of career-oriented fields and expertise.

However, as the concerned individual grows up with time, not all regular activities get to uphold the tag of a 'skill' owing to their generic execution on regular bases. In this case, their recently acquired knowledge pertaining to the systematic execution of a highly complicated task under high caution, alertness and carefulness calls for the execution of a specific set of strategic activities whose timely employment ensures the punctual completion of the fragile task.

Discuss your inert and acquired skills pertaining to your field of interest

I ultimately aspire to hold the managerial post of my dream company.

My inert skills: Communication, Diligence, Punctuality

My acquired skills: Hardworking, Research update, Data upgradation, Clarity, Motivation, Academic Qualification.

Identify those requiring improvement for practically succeeding in the chosen field

Despite having mentioned all my inert and acquired skills pertaining to my careeristic field of interest, a vital management-centric quality where I practically lack at is ‘leadership’. I literally had to acquire this skill as despite being a good communicator, I fail to convince my teammates pertaining to the acceptance of one of the task’s common executive criteria.

Demonstrate an understanding of that chosen field

My field of executive interest is Business Management, pursuing which I would learn new tactics and skills to systematically manage and control any given company's functional framework by tracking its current productivity trend and status and comparing the same with both previous records as well as the lingering futuristic market trends.

Conclusion

The first task required the formulation of an individual presentation that has pictorially analysed my employability skills in relation to my specifically intended career line/ self-business. Prior to that, its support theoretical report has been formulated; wherein both of my previously possessed inert and acquired skills have been identified along with those requiring executive improvement and future acquirement, for practically succeeding in the respective professional field in the long-run. My chosen aspirational field has been well-identified and demonstratively analysed through theoretical elucidation. Furthermore, it has provided an in-depth understanding of that specific field through practically valid and relevant approaches pertaining to its supportive activity environment by referring to published literature.
