Executive Summary

The decision to higher education is very crucial as it helps to build the career of a student. The success rate of a student in a professional field depends on his choice of higher education. A student will shine in his career as much as he will put the effort into his higher studies (Khalid *et al.*, 2018). Higher education is not only just a way of grabbing knowledge but makes the student expert on a particular subject. It increases the depth of the student on specific matters and the strong academic background of the student helps him to get good job offers. The students get the opportunity to learn things from diverse perspectives and their standard of thought get evolved as well (Treadgold, 2018). The students must consider certain things before preparing for higher education and all those things must be exercised by the students with the utmost attention. The first on that list is to find good accommodation. Often students need to go to outline their locality for higher studies as the competition in higher studies is wider and the higher education system is a national level of education which is spread throughout the country (Desmond and Snyder, 2019). The students of Sussex can get a chance at the Universities of Yorkshire and to read there the student must have good accommodation. While preparing for higher education, students must keep searching for proper accommodation according to their budget. The financial capabilities of the students must be considered as well. Many times, living in hostels become expensive and therefore, the students choose to leave as paying guests where they can share the stays with others and the expenses can be divided also. The students should choose the stream in which they are interested and subjects which they like to read as well. In higher studies, students need to make a lot of effort in subjects and if they are not from their zone of interest, it will be hard for them to continue to study on it (Higginbotham, 2022).

Mind Map

To become digital learners students must have a good grip on their communication skills. As in online classes, the digital existence of the students must require better attention, and therefore, the students must have good communication skills so that they can represent themselves better. The students must have time management skills as well because digital learning required a lot of self-discipline, and the students must make time for studies and classes on their initiative. Technical knowledge is a must for digital learning which will help the students to avoid obstacles during classes (Gautam, 2021).

Digital learning is affordable and easily accessible as students from far can join online classes. The working students can also attain digital courses and their attendance will improve as well. But digital learning creates a communication gap between students as they can not meet with the teachers and their classmates. Different technical issues can make obstacles during online classes (next thought, 2018).

Digital learning is one of the potential future education systems as it is very flexible and cost-effective also. Students from abroad can-do various courses through online learning at minimum expense. The classes are possible to customize as well (Educations, 2022).

Learning in Digital Era

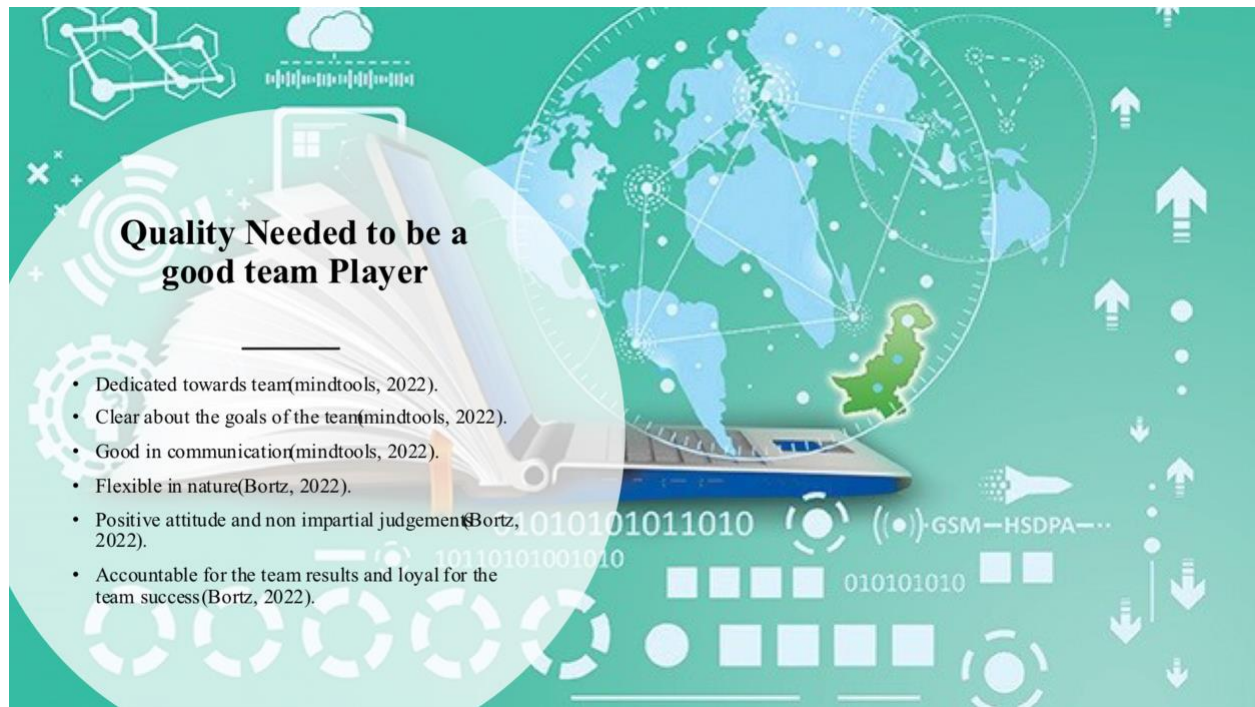

Digital Learning

Personal Identity

- Ex -student of Barlby High School, Yorkshire.
- Present student of management.
- Good as a team player.

Reflection

Terry Borton has developed a reflection model which is known as Borton's model of reflection. In this model, a topic is described by three questions and those are "What?", "So What?" and "Now What?". The first question explains the matter in detail which has happened. The second phase will reflect the feeling and the impression of the author regarding the incident and the third phase will provide a suggestion that the author must implement to solve the situation (Janse, 2022).

What?

As the lockdown was announced in March 2020, the University where I read had declared also that all the classes are going to be conducted via digital media. Though I had a laptop and I have enough technical knowledge, online education was a new concept for me. I was doubtful whether I will be able to take effectively participation in the classes or not and whether my understanding of studies will be clarified or not. On the other hand, how the university will deal with its new changes was another headache for me as well (embibe, 2022).

So What?

I was very impressed with the online procedure of the university and how the whole system was being dealt with. A particular routine was provided and a digital learning account was created for each student from where we were allowed to collect all the study materials and watch the class recordings. The exams were conducted online and the timings were specified earlier on so the students can take better preparation. But there were two things which troubled me a lot. Firstly, I found that I am not getting enough opportunities to communicate with the teachers and even my classmates as well. I was creating a gap of clarification between us. Secondly, I found that my enthusiasm for the study was somehow missing which started to affect my marks.

Now What?

I have decided to follow the plan of action to solve the above-mentioned problem. The first one of them is that I will note down the questions all through the classes and at the end I will place them one by one as It will clear the doubts and I will receive enough attention from the teachers and will be able to make a successful communication with them. Secondly, I will make a routine by myself and I will follow that strictly that is how my syllabus will be covered before time and any preparation will be strong.
