

Data Mining – Dataset Presentation			
Student	Wael Baghdadi 9:30		
Dataset	House Prices		
Marking			
Presentation/Slides (Clarity, readability, flow, accuracy, completeness, performance) Good clear slides, but if you’re going to use animations between slides then be consistent, don’t use lots of different transitions.			(10 marks) 7
Dataset Description (Where did the data come from? What does the data describe? Is the sample large enough? What data formats and types are involved?) Good dataset description. Comment on the extensibility of the dataset is a good point. Good explanation of why you’re removing the 4 attributes.			(50 marks) 40
Dataset Suitability (What features of the dataset lend themselves to data mining? Has it been mined previously? Why does the student feel that they have the contextual background to work with this data?) Good discussion of the suitability and justification for its ease of use. Good contextual knowledge of the field.			(20 marks) 17
Objectives (What does the student plan to investigate/expect to find? Are these SMART?) Plenty of good questions for investigation, and suggestions for how that analysis can be performed.			(20 marks) 16
General comments Question from Hai: Good response, with excellent localisation of the answer. It might be interesting to look at the difference pre-Covid and during Covid. Excellent engagement with other presenters.
