RE: MATHS UP! PROJECT

DRMZ is pleased to present to you a review of this proposal. We very much look forward to collaborating with you to be able to hold a maths study club for those who are indeed of the extra lessons to gain more mathematical skills called Maths Up! Study club. DRMZ has had a high percentage of children struggling to catch up their maths skills due to covid lockdowns with at least 6 months of work to catch up on leaving them a year down on current grade level. The objective of the Maths Up! Is to help the children that attend DRMZ with grades that are behind to catch up with confidence, understanding and overall while maintaining a stress free environment .

This past year, we have been organising a maths study club, with DRMZ members who have been falling behind on crictai maths lessons. We have seen a significant catch up on work that was behind and the most suffered subject that needed extra time to learn due to the stresses of covid. The Maths Up! Study club helps children attending DRMZ gain access to more tutoring lessons on number divisions and how to manage each module within the subject with understanding.

From the start we have seen an overall need for the extra help of Maths Up! And as a result we look to keep the lessons on a timetable as a compulsory activity with further future expenditure. Addressing all the needs of our current Maths Up! Study club members seeking this extra help. Within our proposal requests of 12,582 we aim to provide after school online tutor classes with one to one requests considered, 2021 maths study books for members and maths in club sessions with a professional maths tutor.

We are very grateful for the maths society supporting our Math Up! Study club with members catching up on grades and having the confidence to learn under the pressure that they have faced. If there is any information that hasn't been covered then please dont hesitate to email me for more information at !DRMZ-MathsUP!studyclub@gmail.com.

Much appreciated.

Maths Up! Providing extra help with catch up lessons for DRMZ members falling behind on grades.

Grant proposal

Project abstract

The DRMZ youth project in carmarthen is asking for funding to carry on with our Maths Up! Study club with the overall objective of helping our members of DRMZ reach their potential academic grades by the end of their final term. We plan on having had there work brought up to date with considerable understanding of the subject and curriculum modules completed at grade level.

Statement of need

DRMZ has 79 members, to which 23 are indeed of extra maths help due to learning difficulties such as dyslexia and adhd with some having had stressful lockdowns throughout covid. DRMZ is eligible for above title 1 funds and without the opportunity to receive this extra help i stress that DRMZ members will not academically be able to reach their potential goals with a failing rate very high within the subject.

Program description

The Maths Up! Study club aims to help members who are behind and failing with maths grades to be able to bring their academic grades back up to date with online tutor sessions regarding the failing module within the subject with a variety of different techniques used to help with a number of materials, ranging from online maths quiz, study club and short exams and also a in clubhouse Maths Up! Study club to help build confidence around numbers! Ranging from 12 - 18 years we cover a vast majority of topics including advanced fractions, decimals and percentages, problem solving, algebra and geometry and also exam techniques

Our succeed through secondary school. As a child moves through this challenge and whether it is passing an exam, moving up a set or tackling new challenges, our skilled tutors support members to achieve their goals through a curriculum tailored to their needs.

We aim to show that maths isn't all about problem solving. Not only will the members learn how to solve complex mathematical equations, but the skills they develop whilst working on mathematical functions will develop their problem solving abilities in other ways including :

- *Pattern spotting
- *Working backwards
- *visualising
- *working systematically
- *using logic reasoning

Goals and objectives

The goal for Maths Up! Study club is to enable members with low academic grades in mathematics be able to bring grades up and have more understanding around the subject with a range of modules more understandable with the aim for them to be able to reach a overall exam pass to enable them to be able to have confidence leaving secondary school with a gcse in mathematics.

Studies have shown that poor number skills, who are problem solving at a grade level behind, are more likely to be disruptive in the classroom, also truant from school with much greater risk of dropping out of high school.

The main objectives with wish to include:

Providing a measurable increase in pattern solving, working backwards and visualising. The main objective is that students will double their skills in pattern solving by one to two grades by the end of the study club year.

Enabling poor number solving members access to general curriculum through the use of assistive mathematical technology to scan and solve maths books and other mathematical materials.

Helping members to feel more confident and reassured around learning mathematics on a grade level they need for their academic year.

Timeline

Activities include:

Submit grant proposal - november 2021

Expected grant notification - january 2022

Recruits mathematical tutor - january 2022

Set up in the clubhouse Maths Up! Study club - february 2022

Member introduction - february 2022

Test initial maths grade levels - february 2022

Begin first week start up - february 2022

Maths mock exams - april 2022

Prepare results report - may 2022

Budget

The budget will include the funds for online module quiz, in club house tutoring sessions and one to one help for any member severely struggling to catch up with grades academically

24 sessions of Individual online quiz and module course - 4,194

16 In clubhouse maths tutor sessions- 4,194

One to one advanced tutoring online course - 4,194

=12,582

Evaluation

Standardized number solving tests will be conducted at the start of Maths Up! Study club program and then again at the end of the academic year to determine increases in mathematical speed and comprehension. Additionally, those members

with severely bad grades will be tested to determine increased grade levels and understanding rates.

Staff and organizational information

Peter Bell, professional mathematical tutor, holds a bachelor's degree in special education from Burnley college. Peter Bell has profound experience working with students with suffering grades and is successful for implementing the success pilot test program in 2019 . He is outstanding with problem solving and new age technology, including new methods of overall learning within mathematics.

DRMZ clubhouse Maths Up! Study club in Carmarthen is seeking a grant to help members who have fallen behind academically in school with their mathematics. These members are currently one grade level below their school peers. The main objective is to help bring members up to grade level within this subject covering all modules they are behind with from diversion, problem solving and overall confidence. Total amount of grant asked for is 12,582 to implement this study club.

DRMZ clubhouse has 79 members of which 23 members have fallen behind academically. Additionally these members are at high risk of failing academically and failing in this subject if these members are not given the opportunity to catch up with extra help provided.

The Maths Up! Study club will provide access to online mathematical quizzes and fun mathematical sessions as well as in clubhouse tutor sessions and one to one tutor sessions for the less enabled of members finding it more difficult to understand certain modules.

The end goal for the Maths Up! Study club will be to provide students with low academic grades a higher grade pass with the confidence in learning and progressing with numbers academically. Which will in turn prepare them for gcse exams with a high guarantee of a pass.

The grant includes funds for our online mathematical sessions which include a range of activities from division, number solving, equations and maths quizzes, then in clubhouse sessions with a professional maths tutor to help break down each module with in the trouble area for each member, we will also provide one on one sessions for the less enable members who are suffering to understand at a speed of their co-members. Ensuring all needs are met individually for the subject academically.

Standardized mathematical tests will be conducted at the beginning of Maths Up! Study club to determine the grade level of each member, with them again being conducted at the end of the Maths Up! Study club term to see overall results and grades to determine outcomes.

We very greatly appreciate the maths society club, learning foundation taking a interest providing help for DRMZ carmarthen youth project, Maths Up! Study club implement a club that will most definitely benefit our members. Please contact me regarding any further information via email at !DRMZ-MathsUp!studyclub@gmail.com
