Basic Digital SAFETY

What is basic digital safety: is basically how to be safe online while making purchase or giving personal details .

What is the important : it is very important to be safe online to protect your identity and prevent hacking .

Advantage from Basic Digital Safety follow this four vital steps below

Online Virus

Think carefully before you click on or open something online , link, adverts, photo, you never know where they take you they may contain Viruses., do not accept something if you are not sure about it or from who is coming.,

Keep Software Update

keeping your software update provide new and improved functionality while finding existing problem such as bugs and crashes, is also important for the security and performance of your device and applications and prevent you buy getting attacked from Virus or hacker , stay safe .

Personal Information

Do not share personal information , to unknow link , WIFI , apps , for example : full name , home address , phone number, email.

WIFI : many public WIFI are not secure , specially in place like cafes because of the high chance that someone be able to monitor the sites or apps you are using , and they can get access to it.

Password

Strong and secure of password is your first line of defense against online hacker

WHAT TO DO : generate long password which include upper and lower letter , numbers and symbols. add one extra verification step buy a code sent to your phone , update password every 6 months especially for bank account , or if your device get in to a breach .

WHAT TO DON'T DO : Never share your password to no one , do not include personal details like(name, birthdate), do not save your password in notebooks on your device , do not open links that you don't know the provenience.
