On 6th of June we started to learn 'how to create and design website'. This lesson is one of the important and useful for us because this website supports ~~on~~ our business plan in Managing Enterprise in the 21th century.

take care to avoid word duplication in a sentence.
We designed our website based on our business plan so our business plan is to open a restaurant. Our business name is 'HIMALAYN FEAST' and slogan is 'FAST AND FRESH FOR EVERYONE'. Our main motive is to serve fast and fresh food and we are planning to provide on a best price.

First of all when we started this 'website design' lesson I did not enjoy because I did not understanding about it but at the end it's turn into exiting part. First week we just open the weebly website and did bit work on it.

Second week when we did our work I learned lot of thing such as how to put pictures, how to write and got an idea about changed the font and colour. This week we put our restaurant photo, slogan and changed the colour also.

Third week we worked as a team. We all discuss and made a business website we design by our self. We putted our menu with the food pictures. We had really good time and sometime we though we are a professional web designer anyway at the end we did well.

When I started to learn about the website I thought it not necessary for us but when I did work on it and made an our business website then I realized this is a very important for business because when people searching for restaurant they first go through our website. If website is good and clear people will interesting it and now a days in this digital world website is a good advertisement place. Wherever, whenever people can search it but only website is not an enough it's should be a good website.

So what elements did you include to help enhance Sales?

Good website should be clear and give the reader full information about the business. In a website there should be a clear about place, service and price. So layout should be a clear.

These are very important part but the design and content also important part. If design does not looks good and difficult to see then no one interesting it. In the case of design it should be a nice not to use lots of colour and easy to read. In this digital world lots of people use website to such everything so good website plays very important role in a business. Lots of people they just look at the website and decided to go or buy the things.

In the conclusion we had a good time to make a weebly website and now understanding about the important of website. We made our business plan website together. We putted everything together but in that work I putted a pictures, and I print it out. We thought it was ok but when I print it out it was not same so I still need to do more work on it. We will present this website on our presentation day next week.
