

DIGITAL SAFETY ONLINE

STUDENT NAME: ANNA ADAMOVA

STUDENT ID NUMBER: 2322310

INTRODUCTION: In this poster we will discuss the several ways in which a person can be safe when being online.

Key Methods:

1. Backing up your data is important as it can safeguard your photo key. Documents by backing them up with cloud-based storage system to not lose them.

2. By using password managers it can help you to create and remember passwords without having to worry of someone getting into your personal account and face the risk of getting blackmailed.

3. Three random words are used to create difficult passwords which are hard to crack keeping private information safe from getting black mailed from cyber hackers and criminals.

4. Protect your email with strong and separate passwords as cyber criminals can access private accounts and personal information

5. Install the lattes software and app updates to help protect your devices from hackers cyber criminal activities turn on 2-step verification is recommended help protect your online accounts such as bank Accounts from cyber criminals in today's digital world its essential to stay safe while navigating the internet Basic digital safety involves protecting your personal information using strong passwords and being cautious about what you share online therefore by understanding the digital safety it can help you avoid any risk whist

Conclusion: Using the internet Learn anytime anywhere see What indicators to look out for Email scams phishing yourself online Discover how public WI-FI can affect You and learn how to manage 10 ways to stay safe online get the Lattes anti-virus and firewall Software updates your internet browser use a different password to the one you use for other services. Download updates regularly to make sure you are protected against any new online threats The lattes version have build-in protection against fake websites and viruses

Passwords that combine harder to guess don't let your browser remember your log on details it is much safer to re-enter your details every time you log on even if it takes slightly longer to learn to spot fake emails and websites criminals use them.
