

Data Mining – Dataset Presentation			
Student	Hu Nianbo 10:20		
Dataset	Avocado prices		
Marking			
Presentation/Slides (Clarity, readability, flow, accuracy, completeness, performance) The slides are clear, but you need to practice giving presentations more so that you don't jump between presentation view and editing view.			(10 marks) 5
Dataset Description (Where did the data come from? What does the data describe? Is the sample large enough? What data formats and types are involved?) The description wasn't very clear. Only 5 attributes were really discussed. What about the other attributes?			(50 marks) 25
Dataset Suitability (What features of the dataset lend themselves to data mining? Has it been mined previously? Why does the student feel that they have the contextual background to work with this data?) The dataset is quite small.			(20 marks) 10
Objectives (What does the student plan to investigate/expect to find? Are these SMART?) Some scope for data mining, but the questions raised are more statistical analysis than true data mining questions.			(20 marks) 10
General comments You probably want to find a bigger dataset with more scope for data mining.
