

College Enquiry Chat Bot

Objectives

The objectives of the study is to develop a reliable, convenient, and accurate Chat Bot system aided by Artificial Intelligence to understand and reply the queries of college students and other system users.

Research methods

The survey method will be utilized in the research. This approach is appropriate in gathering the user needs, which will be incorporated in the final app.

Deliverables

The app will be built by taking into account the Artificial Intelligence and machine learning algorithms which will be developed. This method is appropriate in establishing the virtual support devices.

Aims

- To analyse the existing platforms which college students use to enquire for various college activities, with the purpose of getting real-time reply to their inquiries.
- To develop a Chat Bot that utilizes artificial intelligence for the automatic replies
- To test and evaluate the developed system for user acceptance and assess the implementation's efficiency

Development

The Artificial Intelligence and the developed machine learning algorithms will be taken into account. The process will involve the development of a friendly graphical user interface.
