

BASIC DIGITAL SAFETY

STRONG PASSWORDS

1

Install the Microsoft Authenticator. Create a strong password with a combination of characters, numbers, symbols, uppercase, lowercase letters.

SECURE WI-FI

2

Prevents unauthorized users from accessing your network and stealing data.

USE A VPNS

3

VPNs help protect your devices from hacking and are easy to set up on phones, tablets, computers, and routers.

A WEBSITE SAFETY

4

Using tools like <https://check.getsafeonline.org> helps you to check the reliability of a website if uncertain.

DIGITAL FOOTPRINT

5

Your online actions leave a mark known as a digital footprint.

AVOID PHISHING

6

Avoid sending sensitive information via email unless you are certain about the recipient.
