

Introduction to Physiology

Module: Introduction to Physiology

Assessment: 1

Topic: Heart Attack

STUDENT NAME: TENDAI DZITIRO

STUDENT NUMBER: 2011634

Table of Content

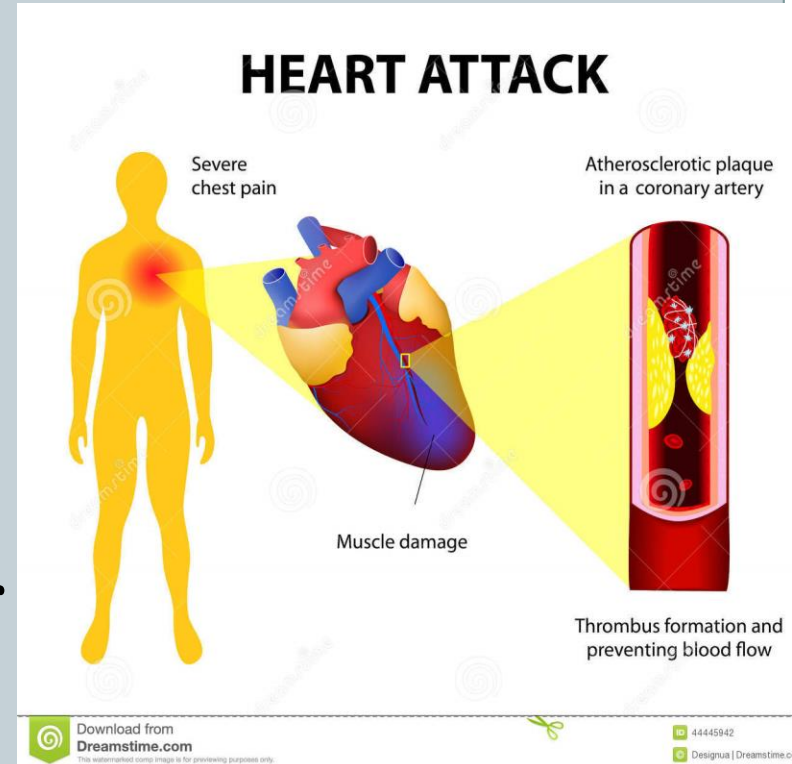

- Introduction
- Anatomy and Physiology
- Questionnaire
- Lifestyle health-related information of the patient
- Health Risks
- Recommendations
- Conclusion
- Reference

- [illegible]

Anatomy and Physiology

- Heart circulates the blood in human body
- It beats 100,000 times a day
- Heart disease symptoms includes pain in heart and pressure
- 64,000 people died each year UK because of heart attack

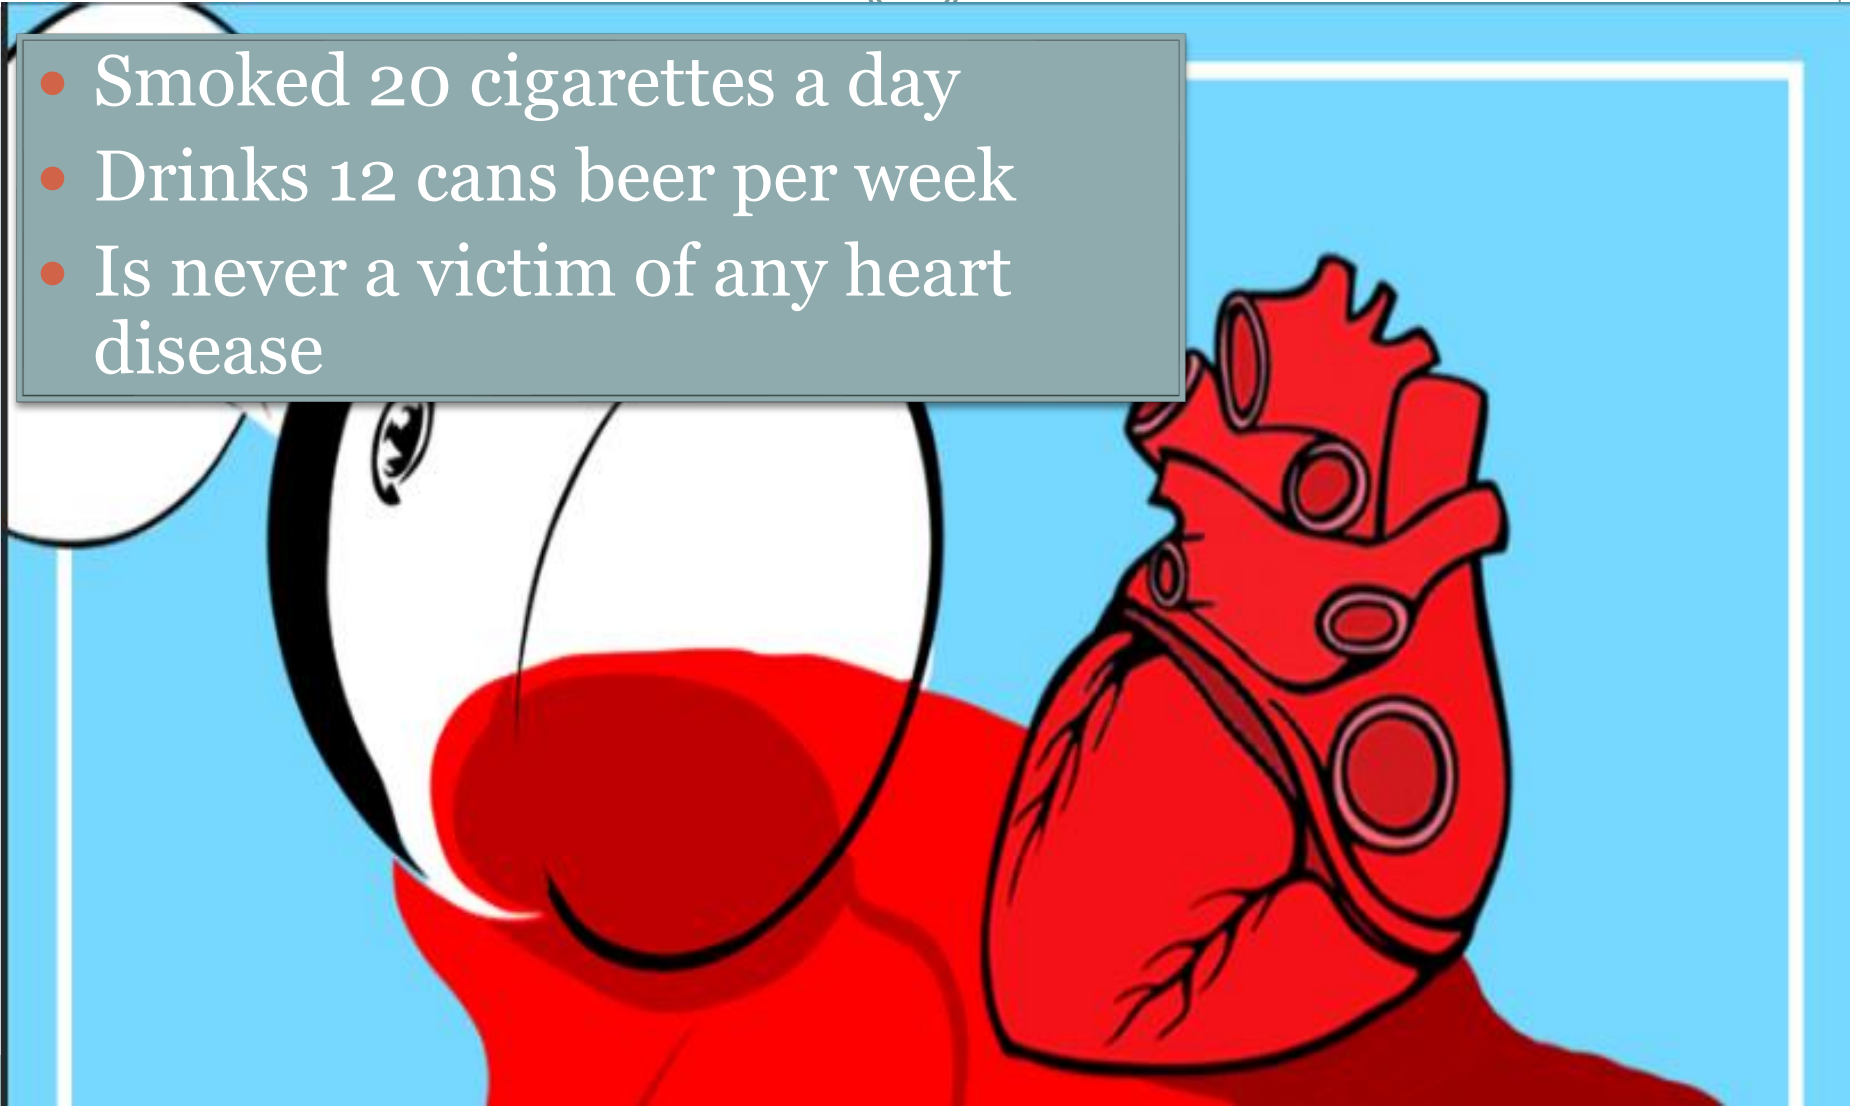

Questionnaire

- Is she a smoker?
- How many cigarettes does she smoke per day?
- Is she an alcoholic?
- Has she ever been a victim of any heart disease?

Lifestyle health-related information of the patient

- Smoked 20 cigarettes a day
- Drinks 12 cans beer per week
- Is never a victim of any heart disease

Health Risks

- Major risk of getting diagnosed
- Smoking can affect lungs as well as heart
- Alcohol thickens and weakens the heart
- Spent most of the time sitting in workplace

Recommendations

- Chance of getting diagnosed with angina and heart attack
- Quit smoking and drinking
- Can join rehab centre
- Can take advices from health and social care service

Conclusion

CONCLUSION

- Introduction to physiology
- Anatomy and physiology
- Questions asked to the patient
