

DIGITAL SAFETY TIPS

Strong password

Try to don't use the same password for multiple websites. Create a not obvious password, it will be more difficult to be hacked

Password Theft

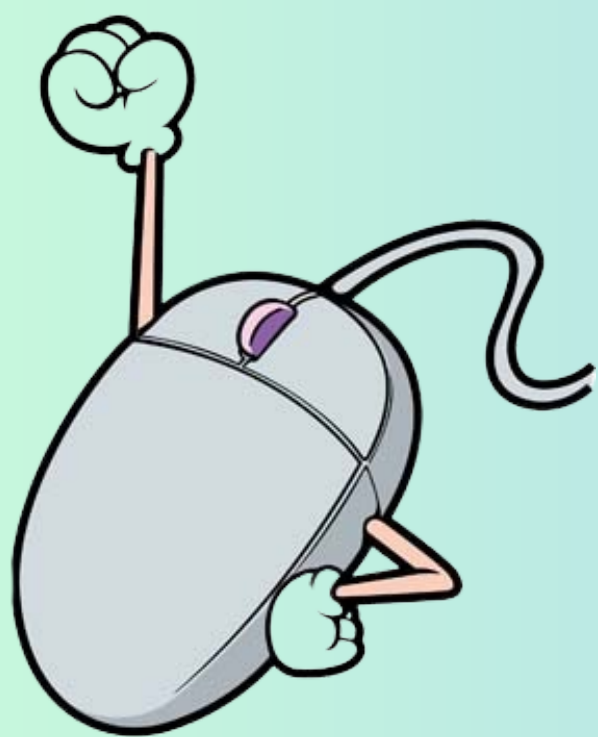

Be careful with links

Don't click on a suspicious links online, they can expose your data or put in danger your device

Secure connection

Make sure you use a VPN (Virtual Private Network), it will protect you also when navigating on public Wi-Fi

Antivirus

Ensure that your device has an antivirus and it's always update, it will block common malwares

Dangerous download

Be careful when you download online, make sure that the app or the website is trusted
