

# Energy Generation and Consumption

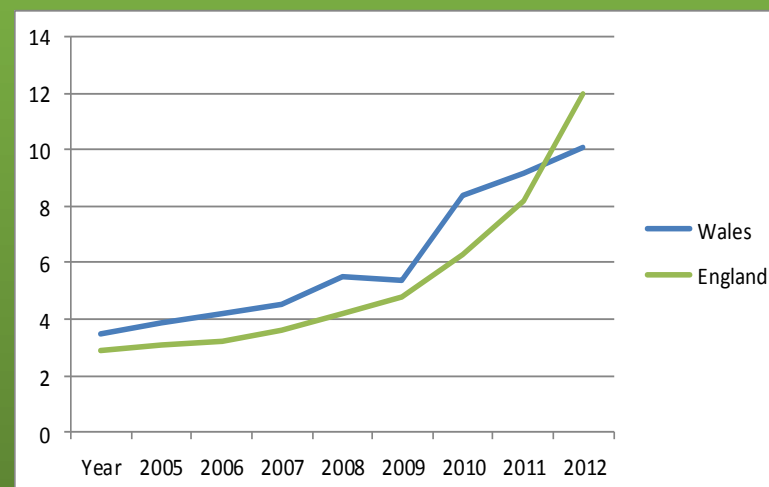

This graph shows There was an increase of Amount of energy created by wales in 2007. After that there was a slow decrease in energy created up to 2013

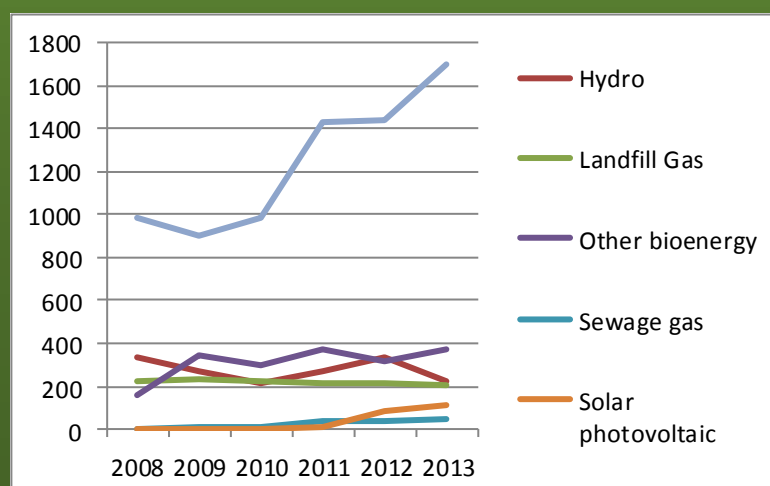

This graph shows that people do not use coal much or bio-energy and waste much anymore . Also the proportion of gas being consumed is going down than its height in 2005 this is also the same with petroleum.

This Graph shows that hydro sewage gas is being generated a lot more than 2008 this gas that is trending upwards. Also solar is trending upwards when energy's also but landfill gas has kept the same.

This graph shows that the total energy consumed is trending up though the years this would mean we have more demand for energy.

This graph shows that energy exports have trending up as they continue to make to much energy for themselves so they any excess will have to be solid.
