Wellbeing Fitness for Woman is called our business. It only woman gym heart of the city centre .We provide all the facility for woman so they can fill comfort and use the gym in the woman only environment. To do the business plan we worked in the group of four everybody as their own part to do .and my part was to do business plan for the organisation .I was responsible for the lay out, and content. Also for the business we learn how to do the gaunt chart cash flow and design a website for the business to create the website it was hard for me because I never used a computer and I don't know much about computer I only know basic thing to do. For example. Typing .but because of my group and help of teacher I did learn and I tried my best to support my group to do the website .I give them the information and idea what are the service we will provide and the facility we have and one of my group member design the website. And added the information I give to support our business plan. After working in the Module Managing Enterprise in the 21ST century I came across digital Skills are very important for everyday life and for work place .now a days without digital skill you can't do anything for your assessment you must be good at computing the assessment we doing you need to have digital skill which I don't have any but because we working in group I am providing all the information and they doing in the computer job I still need lot to learn how to use computer. For example I am doing the primary research for our assessment .getting all the information and we all working as team for the business plan.

Conclusion.

The website we design it will help us publicity for the organisation.my contribution was to create the website, I give the information is what facility we providing what you will get in woman only gym etc. To my group and they put thing in the website. I couldn't be very help full because of my lake of digital skill.

Read through your work prior to submission to check your grammar and syntax. You have for the most part included the required elements, but you needed to go into more detail. It would have been beneficial if you had followed the question layout to aid the layout of your response.
