Week 4 Discussion NOSS

Post your response to the discussion topic by clicking the plus button below.

↻ **SIÂN KIELY** 2/18/25 11:20AM

Active Directory Domain Services allows:

- Centralised user / resource management
- Efficient administration of network resources
- Group policy management & user access control
- Notes
- DNS (domain name system)
- DHCP (dynamic host configuration protocol)
- VPN (virtual private network)
- LAN (local area network)

↻ **THOMAS QIAN** 2/18/25 11:17AM

In Directive Services, a Forest is composed of Trees (Parent Domain) that holds child domains (computers, users) that facilitates information sharing. By trust relations (AD), it allows the share of data thanks to a unique login identifier (SSO)

↻ **SUPPORTIVE PYTHON** 2/18/25 11:17AM

Network operating systems used on virtual machine and resource allocation. Mainly the domain services offered. Active directory domain service is one such offered by Windows server. It allows for the storage of information and management of data and objects. Mainly used to verify, authenticate and facilitate access.

↻ **THOMAS SELLWOOD** 2/18/25 11:17AM

Discussed Active Directory services for Microsoft server, and how to configure these for use on the server. In the tutorial finished the setup of windows server and got the windows client downloaded and setup.

⇒ **ARMAND OCTEAU (2422790)** 2/18/25 11:16AM

We talked a lot about Windows Server, its functionalities, what's its good at (and bad). The Active Directory thingy... Domain forests... How one computer (WS22) manages multiples computers in a LAN(e.g, school network): when we login into a class computer with our credentials.

⇒ **VALIANT GORILLA** 2/18/25 11:16AM

We have covered active directory which is a windows service that manages users and allows for them to have their own roles and privileges. It also manages devices on the network.

⇒ **ZEYU XIE** 2/18/25 11:15AM

NOSS is mainly applied to the classification of computer network management services, involving the monitoring, maintenance and optimization of network equipment and other tasks.

⇒ **MAX** 2/18/25 11:14AM

Directory services

- Active directory and domain services
- Domain forests and trees
- User policies
- Access control

⇒ **JON M** 2/18/25 11:14AM

Talked about MSFT Active Directory Domain Services, their basic structures of Forests and trees, domains and sub-domains, about how network controls can apply to top of tree or to subdomains only (inheritance).

⇒ **POLITE BUFFALO** 2/18/25 11:14AM

Administrating multiple computers from one device

♡ 0 🗨 0

↩ **BEN ROBERTS (2205382)** 2/18/25 11:12AM
Something to do with Windows Directory
Services and also virtualisation and stuff.

Active Directory is a thing that lets you
configure administrate lots of Windows
computers on a network at once.
