

VOTING & POLLING

LIVE

Students contribute ideas and/or express opinion whether openended or by selection from a given set of choices.

Core Enhancing Technology

 Wordwall

LanSchool

Key Enhancements

- **Scalability**—all students can contribute simultaneously
- **Supports Assessment for Learning** - gain feedback from students instantly
- **Discreet**—students who dislike public speaking are more likely to contribute

Teaching and Learning Ideas

- Hold a discussion or a debate on a suitable topic with scope for opposing views and then poll participants to provide a result. You could also hold a vote prior to the debate to evaluate the extent to which the debate has changed participants' perspectives.
- Poll the session participants for their level of understanding of a key topic to evaluate whether it is appropriate to move on, or whether further reinforcement is necessary.
- Ask participants to vote on revision topics during sessions leading up to exams.
- Use anonymous voting to elicit feedback on sensitive subjects.
- Using Wordwall's activity converter, brainstorm questions at the end of a session and then turn it into a vote, to both highlight the difficulties affecting the most students, and answering those questions which are most valuable to the group.
- Use open-ended voting to engage students by getting them to make predictions, prioritise ideas, identify problems or any other appropriate interaction.

Try Also...

Nearpod and Socrative contain voting and polling functionality.
