

REFLECTION

DESCRIPTION

In this group project, my primary duty was to research and deliver information on interdisciplinary approaches to problem-solving. I provided ideas, collaborated with teammates, and actively participated in discussions to make sure our product was comprehensive and logical. My realization that I could take the lead in condensing complex research into an impactful and concise presentation slide was one of the most significant moments of my endeavor.

FEELING

I developed confidence over the assignment especially in my ability to conduct effective research and work well in a team. My groupmates' trust in me motivated me to lend a hand even more. I felt proud of myself at those when I managed to simplify complex concepts into easily understood information and when our team's combined efforts clearly started to pay off in the form of a potent finished product.

EVALUATION

The interaction went very well. One of my strongest traits is my ability to study something thoroughly and to explain it simply. The group dynamic played a significant role in our achievement as well. Each member brought unique ideas and skills to the table that led to a more comprehensive and in-depth presentation. I was very pleased with our communication and the way our efforts came together to form a logical whole.

ANALYSIS

Good group dynamics, delineated task delegation, and mutual respect among members enables us to provide a variety of justification for our success. My research skills played a major role in the foundation of our project, and open communication within our team made sure that everyone's contributions were valued and skillfully integrated. The supportive team atmosphere enabled us to overcome every obstacle we encountered.

CONCLUSION

Raise the quality of our work. Collaboration at the outset of the project may have allowed us to refine our concepts from the start. It will be beneficial to have our final presentation if i continue to ask my colleagues for feedback throughout the process. Even though the experience was excellent, I know there were more opportunities to engage in even more intense behavior.

ACTION PLAN

In the upcoming group projects, I plan to continue applying my research and presentation skills, prioritizing early and ongoing team communication. I'll also ask for feedback frequently to ensure that our work remains in line with our objectives and make a more active effort to start conversations. By continuing to have this thoughtful and cooperative mindset, i will be able to contribute effectively to the group and help to accomplish positive outcomes.

DISCUSSION

It is essential that individuals and organizations learn how to take use of diversity in order to address global concerns, given the present tendencies in globalization. The six person reference group on this topic is tasked with tackling the issue of single plastics in society. Along with using a more structured method of disseminating information, we took into consideration numerous facets of addressing problems with a focus on decision making instruments.

The six members of our team each contributed to the presentation in a way that each was accountable to a certain role. There were three primary sections to the main content. The significance of international teams in solving the issue, the description and justification of the wicked problems, the process of design thinking, instruments for making decisions and conflict resolutions and particular emphasis on the issue of ethics and diplomacy, as well as emotional intelligence. It made sense to take the audience through the process of identifying issues until the point at which the presentation and evaluating potential fixes

The presentation also focused on global teams to solve wicked issues - issues without a right solution. Problems like single-use plastic that don't have a good answer. In response, we emphasized the significance of using a diverse range of perspectives and skill sets when addressing such situations. Our findings' emphasized the value of inter- and interpersonal

cooperation while highlighting the significance of creativity, integration, and equity in issue solutions.

Focusing on my part of the contribution. I presented on two significant topics which are the relationship between negotiation, diplomacy and persuasion and interdisciplinary and collective decision making. The two minute presentation that I have done explains how effective collaboration, particularly in solving complex issues like society's reliance on single-use plastics, relies heavily on diplomacy, persuasion, and negotiation. These skills are crucial in bringing together diverse stakeholders. For interdisciplinary thinking, Tackling wicked problems like single-use plastics requires insights from various fields—environmental science, economics, sociology, and business, among others. In response, we emphasized the significance of using a diverse range of perspectives and skill sets when addressing such situations. Our findings emphasized the value of intrapresential cooperation while highlighting the significance of creativity, integration, and equity in issue solutions.

To sum up, my contribution illustrated how negotiation, persuasion and diplomacy and interdisciplinary thinking formalized frameworks for decision making. Our team came up with a practical way to address the single-use issue plastics as well as other moral psychological issues that the group members brought up. The strategy suggested that perhaps assembling a worldwide team is necessary when tackling some of the world's issues.
