Koushik Modak
Digital skills : Group 6

Being safe online means keeping yourself and others safe from online risks and dangers. Most of us use the internet without thinking much about it, but have you ever stopped to think about the potential dangers that are out there?

Defend your device

Protect your device from virus, spyware and other malign software, by protecting your system. Make sure your antivirus software is settle to receive update automatically. It's the most important thing you can do to protect your device.

Scams, malware and data breaches are frequently hacker it by online thieves to collect your personal data, check properly where your email are coming from.

Create a copy of the data on your system that you use in case your primary data is lost.

Back up important files offline, on an external hard drive, or in the cloud. Also, make sure to store your paper files in a safe place, securely, too.

You can even use backup to recuperate the old file you have deleted.

Make certain you are using the latest version for privacy and sicuraty features.

Be aware of your surroundings, careful when you use a mobile payment, confirm it's safe first.

Pay attention around wi-fi, as once you have joined public network, your device can be seen digitally by anyone else on the network, so avoid using any password-protection sites.
