As we are looking at the things now we there come to realization that lot of things are going to change. Therefore we need to prepare for the coming time. This involves result of complex, changing and competing force. That will also involve the regulations and laws, the governments that impose them, broad trends in consumers, citizen and work sentiment.

These things forced each individual to be prepared as the future is looking uncertain in coming years.

I will advice the friend to invest her life on the education even those who are already in, they have to continue ^{and learn more}. Parents also have to invest on sending their children to school. There are lot of changes that mainly need Technology. Most of companies in our days are using technical things such as mobile phone, Apps, Online. In that way they are taking more ~~jobs~~ from individual. It is very wise to learn more skills that will also improve better communication from

Megatrends are tremendous forces that

18 October 2014

Dear Sir: The reason for this

is that

As we are looking at the things that

have been to learn that lot of

things are going to happen there for

the time to have for the time being

The situation is a result of complex changes

and the political force that will also

include the regulations and laws that

the government must impose there, which

there is a government, a law and work

to do

The things that each individual has to

be able to do in order to be able to

I will return the letter to you and

if you are interested in these things

we will be happy to have you to

know that we have to have a good

idea of what we are doing. There are

of course the things that need to be

done of course in our case we have

technical things that we have to

do. It is not that we are doing

and we are not doing it

it is very wise to have more a little bit

and also to have better communication

from

the government and the private sector that

Staple the standard and method of work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work. The standard should be set by the person who is doing the work.

Shape the Society and with it, the world of work; The economic shifts that distribute the power, wealth, competition and opportunities globally. The disruptive innovation, radical thinking, New business models and resource scarcity that impacting every sector.

Business need a clear and meaningful purpose and mandate to attract the employees, customers and partners.

There must be a focus to know how to deal with the challenges and opportunities which Mega-trends will bring.

As Now at workplaces there are automotive changes. Companies they are highly using Robots which are less expensive than human. That also affect the job for people. In a way it is likely that they are taking over in the area of employment.

Technology is more in demand as it also impacted in improving people's lives. It makes it easy for online shoppers, customer services, Banking, Skype interview and mobile and apps etc. In that way every company or person they save time and money. They are also playing a big role in increasing productivity and as they are quicker in all areas. They also improve standard of living as they make things easier and average life span. It also free people to focus on personal fulfillment. It also brings the threats of Social Unrest and political upheaval.

③

There will be also a challenge in Changing size, distribution and age profile of the World population.

The World population is ageing which put Pressure on business, Social institutions and economies. The Cost of the pensioners will be affected, business models and talent Ambitions. This will have an impact on old people who have less knowledge of Skills. Therefore they will be forced to learn more Skills which is not going to be easy for them. That will be a challenge as the World now is indemand of technology knowledge. They will also be expected to work longer and the retooling will become the norm. The Shortage of a human workforce in a human work force will drive the need for Automation and productivity.

There will be significant increase in the world population. Moving to live in the cities. As the years pass looking at around 2050 the world population will increase in Urban Cities. There will be more created Jobs in the cities. There will be large working-age population that will embrace business ethos, attract Investment and improve their education system which will be more profitable. The nations will be facing the biggest challenge as technology increases the gap with the developed world. Unemployment and Migration will continue to be rampant without significant sustained investment. Due to these technical system the large scale automation. The erosion of the middle class, wealth disparity and job losses will increase the risk of Social unrest in the developed countries.

④

We must remain alert as there will be resource scarcity and climate changes that will affect ~~our~~ lives. There ~~weather~~, will be changes ~~a~~ like weather, rising sea level and water shortages. The energy and water forecast to increase by as much as 50% by 2030.

New types of jobs is alternative energy, New engineering process, product design and waste management and re-use will need to be created to deal with these needs.

As for traditional energy industries, and millions of people employed by them will see a quick restructuring.

These changes will also affect the law. People have to be aware of working law, rules, paying tax ~~and~~. There will be also security methods that will be disadvantage on people as they will be now using it to earn things, camera, which also make jobs scarce for individuals.

Customer service also taking over technically, as there are self users in most places.

Computers and internet will be also in demand as it is now easy to access things online and you can do your work at and connect global and connect doing business and meetings through Skype and video call. That will also save time and money. Therefore it is wise to remain alert and improve the areas that will be helpful in future and make some changes.
