

Panopto: An Overview

Panopto is a powerful video capture tool which can be used in many ways to enrich and improve students' learning experience and academic attainment. Here are a few of its key features and benefits:

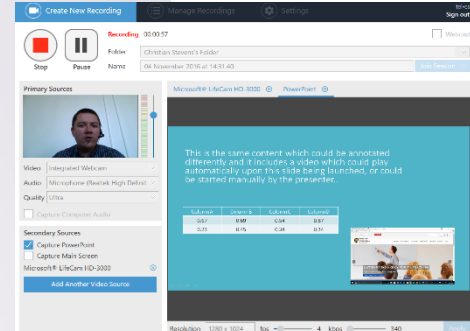

Lecture Capture

Lecture capture is an easy way of maximising the benefits of traditional taught sessions. Recordings can be made available for distance learning students, for review to reinforce understanding or for revision at exam time. Automatic Powerpoint synchronisation means that students get to see the lecturer and the material "as live".

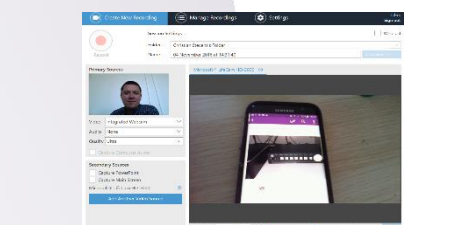

Flipped/Blended Learning Videos

Panopto makes it easy to create short "talking heads" style videos to reinforce important or troublesome concepts, or as a pre- or post-lecture task. The automatic synchronisation with Powerpoint means you can create specific resources around the key slides from your existing presentations within a few clicks.

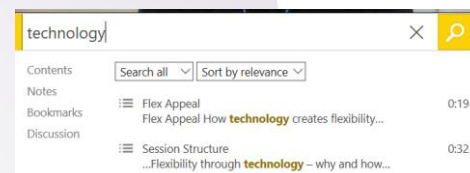

Multi-Camera Recording

Panopto supports several concurrent video sources, therefore practical demonstrations with lecturer commentary are straightforward to set up and record.

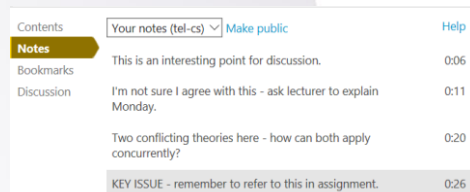

Searchable

Powerpoints and other text captured in a Panopto video can be searched by video viewers so they can get straight to a key point in the video.

Linked Notes

Students viewing a Panopto video can make notes which will be linked to the point in the video when the notes were made.

Analytics

Use data to track usage and assess impact.
