

CYBER SECURITY

USE STRONG PASSWORDS

Using a strong password your data gonna be more safe, especially from virus and hackers.

UPDATE YOUR SOFTWARE

You should update your software regularly, the fact that is connected at the web make your software weaker.

BE CAREFUL WITH LINKS

Don't open suspicious links, if not sure about what is.

ENABLE TWO FACTOR

After entering your password, you'll need to digit one more code; having two layers of protection reduce the probability of any issue.

BE AWARE OF SCAMS

Don't click on URLs from emails or social media messages, and don't assume people are who they say they are when asking for information. If you're talking to kids, you can explain the importance of only interacting with people they know and trust.

KNOW YOUR BASIC CYBER SAFETY TIPS!
