

Question 3 A

The VR exhibit is for the Natural Museum Cardiff. The AR exhibit is also for the same museum.

The VR exhibit will allow one user to be transported back 66 million years ago and see the dinosaurs in their habitats. This will then allow the user to see the skeleton remains of the animal and see it alive as it roams in front of them. The hardware needed for this will be an Oculus Rift with controllers and headphones which will allow one user to be fully immersed. The software will be like a game and will allow the user to see the dinosaur.
