

Guided Notes – Trigonometric Ratios and SOHCAHTOA

Name _____

Triangle Sides (based on θ):

1. Label the triangle below with the correct sides labeled as either hypotenuse, opposite, or adjacent in relation to where θ is located.

2. Complete the following based off of the corresponding triangles below.

Which side is the hypotenuse? _____

Which leg is opposite θ ? _____

Which leg is adjacent to θ ? _____

Which side is the hypotenuse? _____

Which leg is opposite θ ? _____

Which leg is adjacent to θ ? _____

What are the Trigonometric Ratios?

SohCahToa

Sine	$\sin \theta =$ _____
Cosine	$\cos \theta =$ _____
Tangent	$\tan \theta =$ _____

How do we use these ratios?

$$\sin \theta = \frac{o}{h} = \underline{\hspace{2cm}}$$

$$\cos \theta = \frac{a}{h} = \underline{\hspace{2cm}}$$

$$\tan \theta = \frac{o}{a} = \underline{\hspace{2cm}}$$

Find the missing side (use Pythagorean Theorem) and evaluate each for $\sin \theta$, $\cos \theta$, and $\tan \theta$.

$$\sin \theta = \frac{o}{h} = \underline{\hspace{2cm}}$$

$$\cos \theta = \frac{a}{h} = \underline{\hspace{2cm}}$$

$$\tan \theta = \frac{o}{a} = \underline{\hspace{2cm}}$$

$$\sin \theta = \frac{o}{h} = \underline{\hspace{2cm}}$$

$$\cos \theta = \frac{a}{h} = \underline{\hspace{2cm}}$$

$$\tan \theta = \frac{o}{a} = \underline{\hspace{2cm}}$$

How would you solve the following problem?

Suppose $\angle J$ and $\angle K$ are complementary angles in a right triangle. The value of $\tan J = \frac{12}{5}$.

What is the value of $\sin J$?

1. Draw and label a triangle for the problem.

2. Use the given trig ratio to label the lengths of two sides. Then use the Pythagorean Theorem to find the third side.

3. Using the measures of the sides of the triangle, find $\sin J$.

Try this one...

Suppose $\angle A$ and $\angle B$ are complementary angles in a right triangle. The value of $\sin A = \frac{7}{14}$.

What is the value of $\cos A$?
