and
DOUGLAS KELLNER

Chapter 1

In Search of the Postmodern

For the past two decades, the postmodern debates dominated the cultural and intellectual scene in many fields throughout the world. In aesthetic and cultural theory, polemics emerged over whether modernism in the arts was or was not dead and what sort of postmodern art was succeeding it. In philosophy, debates erupted concerning whether or not the tradition of modern philosophy had ended, and many began celebrating a new postmodern philosophy associated with Nietzsche, Heidegger, Derrida, Rorty, Lyotard, and others. Eventually, the postmodern assault produced new social and political theories, as well as theoretical attempts to define the multifaceted aspects of the postmodern phenomenon itself.¹

Advocates of the postmodern turn aggressively criticized traditional culture, theory, and politics, while defenders of the modern tradition responded either by ignoring the new challenger, by attacking it in return, or by attempting to come to terms with and appropriate the new discourses and positions. Critics of the postmodern turn argued that it was either a passing fad (Fo 1986/7; Guattari 1986), a specious invention of intellectuals in search of a new discourse and source of cultural capital (Britton 1988), or yet another conservative ideology attempting to devalue emancipatory modern theories and values (Habermas 1981 and 1987a). But the emerging postmodern discourses and problematics raise issues which resist easy dismissal or facile incorporation into already established paradigms.

In view of the wide range of postmodern disputes, we propose to explicate and sort out the differences between the most significant articulations of postmodern theory, and to identify their central positions, insights, and limitations. Yet, as we shall see, there is no unified postmodern theory, or even a coherent set of positions. Rather, one is struck by the diversities between theories often lumped together as 'postmodern' and the plurality – often conflictual – of postmodern positions. One is also struck by the inadequate and undertheorized notion of the 'postmodern' in the theories which adopt, or are identified in, such terms. To clarify some of the key words within the family of concepts of the postmodern, it is useful to distinguish between the discourses of the modern and the postmodern (see Featherstone 1988).

To begin, we might distinguish between 'modernity' conceptualized as the modern age and 'postmodernity' as an epochal term for describing the period which allegedly follows modernity. There are many discourses of modernity, as there would later be of postmodernity, and the term refers to a variety of economic, political, social, and cultural transformations. Modernity, as theorized by Marx, Weber, and others, is a historical periodizing term which refers to the epoch that follows the 'Middle Ages' or feudalism. For some, modernity is opposed to traditional societies and is characterized by innovation, novelty, and dynamism (Berman 1982). The theoretical discourses of modernity from Descartes through the Enlightenment and its progeny championed reason as the source of progress in knowledge and society, as well as the privileged locus of truth and the foundation of systematic knowledge. Reason was deemed competent to discover adequate theoretical and practical norms upon which systems of thought and action could be built and society could be restructured. This Enlightenment project is also operative in the American, French, and other democratic revolutions which attempted to overturn the feudal world and to produce a just and egalitarian social order that would embody reason and social progress (Toulmin 1990).

Aesthetic modernity emerged in the new avant-garde modernist movements and bohemian subcultures, which rebelled against the alienating aspects of industrialization and rationalization, while seeking to transform culture and to find creative self-realization in art. Modernity entered everyday life through the dissemination of modern art, the products of consumer society, new technologies,

and new modes of transportation. The dynamics by which modernity produced the colonial world can be described as processes of industrialization, cultural differentiation, bureaucratization, and rationalization, which constituted the modern world.

Yet the construction of modernity was also a process of pain and misery for its victims, ranging from the oppressed and artisans oppressed by capitalism to the oppression of women from the public sphere to imperialist colonialization. Modernity's disciplinary institutions, practices, and discourses reconstituted its modes of domination and control (see Foucault in Chapter 2). The 'dialectic' of modernity (Horkheimer and Adorno 1972) thus turned reason into its opposite, and the promise of liberation masked forms of oppression. The defenders of modernity (Habermas, etc.) claim that it has 'unfulfilled potential' and that its limitations and destructive effects are the result of its own success.

Postmodern theorists, however, claim that the high tech media society, emerging from the information age, are producing a new postmodernity. They claim that the era of postmodernity is a new epoch of history and novel sociocultural formations, concepts and theories. Theorists (Lyotard, Harvey, etc.) claim that the new technologies and media, new forms of knowledge, and the new economic system are producing a new postmodernity. Baudrillard and Lyotard interpret the new types of information, knowledge, and culture as neo-Marxist theorists like Jameson interpret postmodernity in terms of development. Postmodernity is marked by a greater degree of heterogeneity, homogenization across the globe, increasing cultural fragmentation of space and time, and new modes of production and culture. These conditions provide the basis for postmodern theory and

and new modes of transportation and communication. The dynamics by which modernity produced a new industrial and colonial world can be described as 'modernization' – a term denoting those processes of individualization, secularization, industrialization, cultural differentiation, commodification, urbanization, bureaucratization, and rationalization which together have constituted the modern world.

Yet the construction of modernity produced untold suffering and misery for its victims, ranging from the peasantry, proletariat, and artisans oppressed by capitalist industrialization to the exclusion of women from the public sphere, to the genocide of imperialist colonialization. Modernity also produced a set of disciplinary institutions, practices, and discourses which legitimate its modes of domination and control (see our discussion of Foucault in Chapter 2). The 'dialectic of Enlightenment' (Horkheimer and Adorno 1972) thus described a process whereby reason turned into its opposite and modernity's promises of liberation masked forms of oppression and domination. Yet defenders of modernity (Habermas 1981, 1987a, and 1987b) claim that it has 'unfulfilled potential' and the resources to overcome its limitations and destructive effects.

Postmodern theorists, however, claim that in the contemporary high tech media society, emergent processes of change and transformation are producing a new postmodern society and its advocates claim that the era of postmodernity constitutes a novel stage of history and novel sociocultural formation which requires new concepts and theories. Theorists of postmodernity (Baudrillard, Lyotard, Harvey, etc.) claim that technologies such as computers and media, new forms of knowledge, and changes in the socio-economic system are producing a postmodern social formation. Baudrillard and Lyotard interpret these developments in terms of novel types of information, knowledge, and technologies, while neo-Marxist theorists like Jameson and Harvey interpret the postmodern in terms of development of a higher stage of capitalism marked by a greater degree of capital penetration and homogenization across the globe. These processes are also producing increased cultural fragmentation, changes in the experience of space and time, and new modes of experience, subjectivity, and culture. These conditions provide the socioeconomic and cultural basis for postmodern theory and their analysis provides the per-

spectives from which postmodern theory can claim to be on the cutting edge of contemporary developments.

In addition to the distinction between modernity and postmodernity in the field of social theory, the discourse of the postmodern plays an important role in the field of aesthetics and cultural theory. Here the debate revolves around distinctions between modernism and postmodernism in the arts.² Within this discourse, 'modernism' could be used to describe the art movements of the modern age (impressionism, *l'art pour l'art*, expressionism, surrealism, and other avant-garde movements), while 'postmodernism' can describe those diverse aesthetic forms and practices which come after and break with modernism. These forms include the architecture of Robert Venturi and Philip Johnson, the musical experiments of John Cage, the art of Warhol and Rauschenberg, the novels of Pynchon and Ballard, and films like *Blade Runner* or *Blue Velvet*. Debates centre on whether there is or is not a sharp conceptual distinction between modernism and postmodernism and the relative merits and limitations of these movements.

The discourses of the postmodern also appear in the field of theory and focus on the critique of modern theory and arguments for a postmodern rupture in theory. Modern theory – ranging from the philosophical project of Descartes, through the Enlightenment, to the social theory of Comte, Marx, Weber and others³ – is criticized for its search for a foundation of knowledge, for its universalizing and totalizing claims, for its hubris to supply apodictic truth, and for its allegedly fallacious rationalism. Defenders of modern theory, by contrast, attack postmodern relativism, irrationalism, and nihilism.

More specifically, postmodern theory provides a critique of representation and the modern belief that theory mirrors reality, taking instead 'perspectivist' and 'relativist' positions that theories at best provide partial perspectives on their objects, and that all cognitive representations of the world are historically and linguistically mediated. Some postmodern theory accordingly rejects the totalizing macroperspectives on society and history favoured by modern theory in favour of microtheory and micropolitics (Lyotard 1984a). Postmodern theory also rejects modern assumptions of social coherence and notions of causality in favour of multiplicity, plurality, fragmentation, and indeterminacy. In addition, post-

In Search of the Postmodern

modern theory abandons the search for a foundation by much modern theory in favour of a de-centred and fragmented perspective.

Thus, to avoid conceptual confusion, the term 'postmodernity' follows modernity, and 'postmodernism' describes the cultural and artifacts in the cultural movements, texts, and discourses which distinguish between 'modern theory' and 'postmodern theory' as between 'modern politics' and 'postmodern politics', or trade union politics' associated with local politics, or a broad array of discourses and practices.

To help clarify and illuminate the discourse of the postmodern, we begin by specifying its meanings (1.1). Next, we search for the primary postmodern theory in the field of theory, the concept of a new postmodern theory, the theme by the late 1970s (1.2). Finally, we articulate our interrogations of the postmodern theories that will guide our inquiry.

1.1 Archaeology of the Postmodern

Our archaeology of postmodern theory begins with the term in its uneven development. We begin by searching for the term in its discourses as they have appeared in the term archaeology in a number of contexts, more than in Foucault's technique of excavation, the rules which constitute the term. In undertaking such an excavation, we anticipate of and precede the term, to gain currency at a later date. John Watkins Chapman, in 1870 to designate painting, the term 'avant-garde' than French (p. 7). The term appeared

In addition, post-

modern theory abandons the rational and unified subject postulated by much modern theory in favour of a socially and linguistically decentred and fragmented subject.

Thus, to avoid conceptual confusion, in this book we shall use the term 'postmodernity' to describe the supposed epoch that follows modernity, and 'postmodernism' to describe movements and artifacts in the cultural field that can be distinguished from modernist movements, texts, and practices. We shall also distinguish between 'modern theory' and 'postmodern theory', as well as between 'modern politics' which is characterized by party, parliamentary, or trade union politics in opposition to 'postmodern politics' associated with locally based micropolitics that challenge a broad array of discourses and institutionalized forms of power.

To help clarify and illuminate the confusing and variegated discourse of the postmodern, we shall first provide an archaeology of the term, specifying its history, early usages, and conflicting meanings (1.1). Next, we situate the development of contemporary postmodern theory in the context of post-1960s France where the concept of a new postmodern condition became an important theme by the late 1970s (1.2). And in 1.3 we sketch the problematic of our interrogations of postmodern theory and the perspectives that will guide our inquiries throughout this book.

1.1 Archaeology of the Postmodern

Our archaeology of postmodern discourse explores the history of the term in its uneven development within diverse theoretical fields. We begin by searching for sediments and layers of postmodern discourses as they have accumulated historically. We thereby use the term archaeology in a broad and metaphorical sense rather than in Foucault's technical sense of an analysis that articulates the rules which constitute and govern a given discourse (see 2.2). In undertaking such an inquiry, one discerns that there are anticipations of and precursors to ideas and terminology which gain currency at a later date. For example, an English painter, John Watkins Chapman, spoke of 'postmodern painting' around 1870 to designate painting that was allegedly more modern and avant-garde than French impressionist painting (Higgins 1978: p. 7). The term appeared in 1917 in a book by Rudolf Pannwitz,

Die Krisis der europäischen Kultur, to describe the nihilism and collapse of values in contemporary European culture (cited in Welsch 1988: pp. 12–13). Following Nietzsche, Pannwitz described the development of new 'postmodern men' who would incarnate militarist, nationalistic, and elite values – a phenomenon soon to emerge with fascism which also called for a break with modern Western civilization.

After World War II, the notion of a 'postmodern' break with the modern age appeared in a one-volume summation by D.C. Somervell of the first six volumes of British historian Arnold Toynbee's *A Study of History* (1947), and thereafter Toynbee himself adopted the term, taking up the notion of the postmodern age in Volumes VIII and IX of his *A Study of History* (1963a and 1963b; both orig. 1954). Somervell and Toynbee suggested the concept of a 'post-Modern' age, beginning in 1875, to delineate a fourth stage of Western history after the Dark Ages (675–1075), the Middle Ages (1075–1475), and the Modern (1475–1875) (Somervell 1947: p. 39). On this account, Western civilization had entered a new transitional period beginning around 1875 which Toynbee termed the 'post-Modern age'. This period constituted a dramatic mutation and rupture from the previous modern age and was characterized by wars, social turmoil and revolution. Toynbee described the age as one of anarchy and total relativism. He characterized the previous modern period as a middle-class bourgeois era marked by social stability, rationalism, and progress – a typical bourgeois middle-class conception of an era marked by cycles of crisis, war, and revolution. The postmodern age, by contrast, is a 'Time of Troubles' marked by the collapse of rationalism and the ethos of the Enlightenment.

Toynbee, however, did not develop a systematic theory of the new postmodern era and his universalistic philosophy of history with its notion of historical cycles of the rise and decline of civilizations, his philosophical idealism, and the religious overtones of his analysis would be totally foreign to those who took up the concept of postmodernity in the contemporary scene. Toynbee's scenario is reminiscent in some ways of Nietzsche's *Will to Power* and Spengler's *Decline of the West* with their diagnosis of social and cultural nihilism in the present age. All projected a historical process of regression combined with different projects of cultural renewal. All saw the modern age rapidly approaching its

end and interpreted this in terms of values, institutions, and

Several historical-social theories appeared in the 1950s in various disciplines. In his introduction to *Culture*, cultural historian Rosenberg postmodern to describe the postmodern (Rosenberg and White 1957: p. 4). certain fundamental changes in culture:

As Toynbee's Great Western World gets urbanized and industrialized, the population soars, a certain new Greenberg can mean something new under the sun with his neighbors in San Francisco, Sydney and New York. The world described by Richard Wright is not into the movie house with the rest of us. First he himself becomes an interest. When he is momentarily seems to be as titillated as the products. In our time, the his lowest level, as some (1957: p. 4).

Rosenberg describes the world, its promising and short, the postmodern. Any rational consideration he will be overtaken by (1957: p. 5). The same in *The Landmarks of the Post-Modern World* (1957) was roughly equivalent to 'trial society' and Drucker's tendency. In his 1957 'unmarked point during moved out of the Modern era' (Drucker 1957: p. 4) the modern Cartesian

Several historical–sociological notions of a new postmodern age appeared in the 1950s in the United States within a variety of disciplines. In his introduction to a popular anthology on *Mass Culture*, cultural historian Bernard Rosenberg used the term postmodern to describe the new conditions of life in mass society (Rosenberg and White 1957: pp. 4–5). Rosenberg claimed that certain fundamental changes were taking place in society and culture:

As Toynbee's Great West Wind blows all over the world, which quickly gets urbanized and industrialized, as the birth rate declines and the population soars, a certain sameness develops everywhere. Clement Greenberg can meaningfully speak of a universal mass culture (surely something new under the sun) which unites a resident of Johannesburg with his neighbors in San Juan, Hong Kong, Moscow, Paris, Bogota, Sydney and New York. African aborigines, such as those recently described by Richard Wright, leap out of their primitive past – straight into the movie house where, it is feared, they may be mesmerized like the rest of us. First besieged with commodities, postmodern man himself becomes an interchangeable part in the whole cultural process. When he is momentarily freed from his own *kitsch*, the Soviet citizen seems to be as titillated as his American counterpart by Tin Pan Alley's products. In our time, the basis for an international sodality of man at his lowest level, as some would say, appears to have been formed (1957: p. 4).

Rosenberg describes the ambiguity of the new postmodern world, its promising and threatening features, and concludes: 'In short, the postmodern world offers man everything or nothing. Any rational consideration of the probabilities leads to a fear that he will be overtaken by the social furies that already beset him' (1957: p. 5). The same year, economist Peter Drucker published *The Landmarks of Tomorrow* subtitled 'A Report on the New Post-Modern World' (1957). For Drucker, postmodern society was roughly equivalent to what would later be called 'postindustrial society' and Drucker indeed came to identify himself with this tendency. In his 1957 book, however, he argued that: 'At some unmarked point during the last twenty years we imperceptibly moved out of the Modern Age and into a new, as yet nameless, era' (Drucker 1957: p. ix). He describes a philosophical shift from the modern Cartesian world-view to a 'new universe of pattern,

purpose, and process'; to new technologies and power to dominate nature with their resulting responsibilities and dangers; and to transformations wrought by the extension of education and knowledge. In the optimistic mode of theorists of the 'postindustrial society', Drucker believed that the postmodern world would see the end of poverty and ignorance, the decline of the nation state, the end of ideology, and a worldwide process of modernization.

A more negative notion of a new postmodern age emerges in C. Wright Mills' *The Sociological Imagination* (1959). Mills claims that: 'We are at the ending of what is called The Modern Age. Just as Antiquity was followed by several centuries of Oriental ascendancy, which Westerners provincially call The Dark Ages, so now The Modern Age is being succeeded by a post-modern period' (1959: pp. 165-6). Mills believed that 'our basic definitions of society and of self are being overtaken by new realities' and that it is necessary to conceptualize the changes taking place in order to 'grasp the outline of the new epoch we suppose ourselves to be entering' (1959: p. 166). In conceptualizing transformations of the present situation, he claimed that many previous expectations and images, and standard categories of thought and of feeling, are no longer of use. In particular, he believed that Marxism and liberalism are no longer convincing because both take up the Enlightenment belief in the inner connection between reason and freedom, which holds that increased rationality would produce increased freedom. By contrast, Mills claims that in the present this can no longer be assumed.

In an analysis close to that of the Frankfurt School, Mills points to some of the ways that increased societal rationalization is diminishing freedom and he paints the spectre of a society of 'cheerful robots' who might well desire, or happily submit to, increased servitude. Mills, however, like Toynbee and the other theorists cited, is very much a modernist, given to sweeping sociological generalization, totalizing surveys of sociology and history, and a belief in the power of the sociological imagination to illuminate social reality and to change society. Consequently, the early uses of the term postmodern in social and cultural theory had not made the conceptual shifts (described in the next section), which would come to characterize the postmodern turn in theory.

In his 1961 essay, 'The Revolution in Western Thought', Huston Smith (1982), however, found that postmodern conceptual shifts

had greatly affected culture and the arts. For Smith, the 'mutation in Western mind'. He describes this view that reality is ordered and intelligence can grasp it. It is unordered and ultimately modern scepticism and another intellectual period characterized by a more holistic

A more systematic than is found in the work of the historian Geoffrey Barraclough *Primary History* (1964). The nature of contemporary life we live today is 'different from the world in which we live'. He claims that analysis of the 'old world' and the new terms of reference continuity in history, but not out for as significant entities, the elements of continuity. In short, we live in a distinct period of time, it off from the preceding period, call 'medieval history' (1964: p. 12). After discussing Barraclough rejects the current historical situation modern to describe (1964: p. 23). He describes revolutionary developments imperialism meeting movements, by the transformations and by a new outlook

had greatly affected contemporary science, philosophy, theology, and the arts. For Smith, the twentieth century has brought a mutation in Western thought that inaugurates the 'post-modern mind'. He describes the transformation from the modern world-view that reality is ordered according to laws that the human intelligence can grasp, to the postmodern world-view that reality is unordered and ultimately unknowable. He suggests that post-modern scepticism and uncertainty is only a transition to yet another intellectual perspective, one that hopefully will be characterized by a more holistic and spiritual outlook.

A more systematic and detailed notion of the postmodern age than is found in the works mentioned so far is present in British historian Geoffrey Barraclough's *An Introduction to Contemporary History* (1964). Barraclough opens his explorations of the nature of contemporary history by claiming that the world in which we live today is 'different, in almost all its basic preconditions, from the world in which Bismarck lived and died' (1964: p. 9). He claims that analysis of the underlying structural changes between the 'old world' and the 'new world' requires 'a new framework and new terms of reference' (ibid.). Against theories which emphasize continuity in history, Barraclough argues: 'What we should look out for as significant are the differences rather than the similarities, the elements of discontinuity rather than the elements of continuity. In short, contemporary history should be considered as a distinct period of time, with characteristics of its own which mark it off from the preceding period, in much the same way as what we call 'medieval history' is marked off ... from modern history' (1964: p. 12). After discussing some of the contours of the new era, Barraclough rejects some previous attempts to characterize the current historical situation and then proposes the term post-modern to describe the period which follows modern history (1964: p. 23). He describes the new age as being constituted by revolutionary developments in science and technology, by a new imperialism meeting resistance in Third World revolutionary movements, by the transition from individualism to mass society, and by a new outlook on the world and new forms of culture.

While the term postmodern was occasionally used in the 1940s and 1950s to describe new forms of architecture or poetry, it was not widely used in the field of cultural theory to describe artifacts that opposed and/or came after modernism until the 1960s and

had greatly affected contemporary science, philosophy, theology, and the arts. For Smith, the twentieth century has brought a mutation in Western thought that inaugurates the 'post-modern mind'. He describes the transformation from the modern world-view that reality is ordered according to laws that the human intelligence can grasp, to the postmodern world-view that reality is unordered and ultimately unknowable. He suggests that post-modern scepticism and uncertainty is only a transition to yet another intellectual perspective, one that hopefully will be characterized by a more holistic and spiritual outlook.

A more systematic and detailed notion of the postmodern age than is found in the works mentioned so far is present in British historian Geoffrey Barraclough's *An Introduction to Contemporary History* (1964). Barraclough opens his explorations of the nature of contemporary history by claiming that the world in which we live today is 'different, in almost all its basic preconditions, from the world in which Bismarck lived and died' (1964: p. 9). He claims that analysis of the underlying structural changes between the 'old world' and the 'new world' requires 'a new framework and new terms of reference' (ibid.). Against theories which emphasize continuity in history, Barraclough argues: 'What we should look out for as significant are the differences rather than the similarities, the elements of discontinuity rather than the elements of continuity. In short, contemporary history should be considered as a distinct period of time, with characteristics of its own which mark it off from the preceding period, in much the same way as what we call 'medieval history' is marked off ... from modern history' (1964: p. 12). After discussing some of the contours of the new era, Barraclough rejects some previous attempts to characterize the current historical situation and then proposes the term post-modern to describe the period which follows modern history (1964: p. 23). He describes the new age as being constituted by revolutionary developments in science and technology, by a new imperialism meeting resistance in Third World revolutionary movements, by the transition from individualism to mass society, and by a new outlook on the world and new forms of culture.

While the term postmodern was occasionally used in the 1940s and 1950s to describe new forms of architecture or poetry, it was not widely used in the field of cultural theory to describe artifacts that opposed and/or came after modernism until the 1960s and

1970s. During this period, many cultural and social theorists began discussing radical breaks with the culture of modernism and the emergence of new postmodern artistic forms. Irving Howe (1970; orig. 1959) and Harry Levin (1966; orig. 1960) were generally negative toward the new postmodern culture, which they interpreted in terms of the decline of Enlightenment rationalism, anti-intellectualism, and loss of the modernist hope that culture could advance social change. For Susan Sontag (1972), Leslie Fiedler (1971), and Ihab Hassan (1971), by contrast, postmodern culture is a positive development which opposes the oppressive aspects of modernism and modernity. Expressing her dissatisfaction with modernist fiction and modes of interpretation, Sontag's influential essays from the mid-1960s celebrated the emergence of a 'new sensibility' (a term first used by Howe) in culture and the arts which challenges the rationalist need for content, meaning, and order. The new sensibility, by contrast, immerses itself in the pleasures of form and style, privileging an 'erotics' of art over a hermeneutics of meaning.

The 1960s were the period of pop art, film culture, happenings, multi-media light shows and rock concerts, and other new cultural forms. For Sontag, Fiedler, and others, these developments transcended the limitations of previous forms like poetry or the novel. Artists in many fields began mixing media and incorporating *kitsch* and popular culture into their aesthetic. Consequently, the new sensibility was more pluralistic and less serious and moralistic than modernism.

Even more than Sontag, Fiedler applauded the breakdown of the high-low art distinction and the appearance of pop art and mass cultural forms. In his essay 'The New Mutants' (1971: pp 379-400; orig. 1964), Fiedler described the emergent culture as a 'post-' culture that rejected traditional values of Protestantism, Victorianism, rationalism, and humanism. While in this essay he decries postmodern art and the new youth culture of nihilistic 'post-modernists', he later celebrated postmodernism and saw positive value in the breakdown of literary and cultural tradition. He proclaimed the death of the avant-garde and modern novel and the emergence of new postmodern artforms that effected a 'closing of the gap' between artist and audience, critic and layperson (Fiedler 1971: pp. 461-85; orig. 1970). Embracing mass culture and decrying modernist elitism, Fiedler called for a new post-

In Search of the Postmodern

modern criticism that abandon pretentiousness, in favour of a direct address to the reader within a psychological framework.

But the most prolific celebration of postmodernism was carried through a series of discussions of postmodernism (Hassan 1979, 1987) – although he had previously moved from the term on the grounds that it went beyond even postmodernism (Hassan 1979: p. 1). This work of work which is itself often postmodern in style, an assemblage-like style that consists largely of quotations and narrative fragments, celebrates postmodernism as a 'decisive break' with capitalism and Western categories of modern literature as symptomatic of a 'crisis' throughout Western society. The 'new sensibility' of silence' is characterized by a 'new sensibility' (Hassan 1987: p. 5) and Western culture.

Postmodern forms in literature and architecture continued developing in the 1960s, accompanied by a proliferation of new arts. In architecture, there were a rejection of the formalism of the high modernism and architects like Le Corbusier to a new architecture were belied in social and urban housing projects. Charles Jencks' *Language of Modern Architecture* (1973) described modern style based on eclectic and postmodernism to disseminate the concept of the 'new sensibility'.

Against modernist values of rationality, postmodern art exhibits a new sensibility, and a new eclecticism. The 'new sensibility' characteristic of the historicism and a desire for radically new art forms, a quotation and play with past forms, and in some cases down to the avant-garde of the modernist movement, and called for a new postmodernist art often took the form of a happily coexisted in a pluralistic

modern criticism that abandons formalism, realism, and highbrow pretentiousness, in favour of analysis of the subjective response of the reader within a psychological, social, and historical context.

But the most prolific celebration and popularization of literary postmodernism was carried through by Hassan, who published a series of discussions of postmodern literature and thought (1971, 1979, 1987) – although he has recently tried to distance himself from the term on the grounds that it is inadequate and that we are beyond even postmodernism (Hassan 1987: pp. xi–xvii). In a body of work which is itself often postmodern in its non-linear, playful, assemblage-like style that constructs a pastiche text comprised largely of quotations and name-dropping, Hassan characterizes postmodernism as a 'decisive historical mutation' from industrial capitalism and Western categories and values. He reads post-modern literature as symptomatic of the changes occurring throughout Western society. The new 'anti-literature' or 'literature of silence' is characterized by a 'revulsion against the Western self' (Hassan 1987: p. 5) and Western civilization in general.

Postmodern forms in literature, poetry, painting, and architecture continued developing in the 1970s and 1980s and were accompanied by a proliferation of postmodern discourses in the arts. In architecture, there were strong reactions against the purity and formalism of the high modern style. The utopian dreams of architects like Le Corbusier to engineer a better world through architecture were belied in sterile skyscrapers and condemned urban housing projects. Charles Jencks' influential book, *The Language of Modern Architecture* (1977), celebrated a new post-modern style based on eclecticism and populism, and helped to disseminate the concept of the postmodern.

Against modernist values of seriousness, purity, and individuality, postmodern art exhibits a new insouciance, a new playfulness, and a new eclecticism. The elements of sociopolitical critique characteristic of the historical avant-garde (Burger 1984) and desire for radically new art forms are replaced by pastiche, quotation and play with past forms, irony, cynicism, commercialism, and in some cases downright nihilism. While the political avant-garde of the modernist movement celebrated negation and dissidence, and called for a revolution of art and life, most postmodernist art often took delight in the world as it is and happily coexisted in a pluralism of aesthetic styles and games.

Other theorists and artists, however, such as Jenny Holzer, Barbara Kruger, and Hans Haacke sought an oppositional current in postmodern art and produced interesting new forms of political art that challenge and subvert prevailing ideologies and codes of representation (see Foster 1983; Conner 1989; Hutcheon 1989).

While Sontag, Fiedler, Hassan, and others valorize postmodern culture as a refreshing break with stale conventions and practices in the arts and life, cultural theorist George Steiner (1971), by contrast, attacked the new 'post-culture' which he claims has rejected and destroyed the foundational assumptions and values of Western society. For Steiner this involves: a loss of geographical and sociological centrality, where the Western world, and the United States in particular, could claim moral superiority and rights over 'uncivilized' peoples; an incredulous attitude toward progress as the trajectory and goal of history, accompanied by a dark pessimism toward the future and a decline of utopian values; and a scepticism toward the modernist belief in a direct correlation between liberal-humanist principles and moral conduct, a position made questionable in this century by the savagery of world wars and the harmonious coexistence of high culture and concentration camps. Thus, for Steiner post-(Enlightenment/humanist/modern) culture no longer blindly and unproblematically trusts in science, art, and reason as beneficent, humanizing forces, and, consequently, there has been a loss of ethical absolutes and certainties. As a cultural conservative, he attacks the political struggles of the 1960s, the countercultural movements, and radicalism within the academy. Steiner bemoans the loss of community, identity, and classical humanism, while deploring the rise of mass culture for eroding standards of classical literacy. He acknowledges, however, that society cannot turn back and must therefore move as best it can into the brave new world of science and technology.

A similar sense that an old era is coming to an end and a new historical situation and choices now confront us is found in *The Active Society* by sociologist Amitai Etzioni (1968) who advances the notion of a postmodern society which he interprets more positively than Steiner. For Etzioni, World War II was a turning point in history; he argued that the postwar introduction of new modes of communication, information, and energy inaugurated a postmodern period. He hypothesized that relentless technological development would itself either destroy all previous values, or

would make possible the use of technology to better human life and to solve all social problems. Etzioni championed an 'active society' in which normative values would guide technological developments and human beings would utilize and control technology for the benefit of humanity. This activist normative ideal was one of the few positive visions of a postmodern future, although Etzioni was also aware of the dangers.

In the mid-1970s, more books appeared in the United States which used the term postmodern to designate a new era in history. Theologian Frederick Ferre's *Shaping the Future. Resources for the Post-Modern World* (1976) projected an alternative set of values and institutions for a postmodern consciousness and new future. His emphasis was primarily positive and took the form of quasi-religious prophecy and advocacy of religious values to guide the new age. In *The Cultural Contradictions of Capitalism* (1976), sociologist Daniel Bell also took up the theme that the modern era was coming to an end and that humanity now faced fundamental choices for the future: 'We are coming to a watershed in Western society: we are witnessing the end of the bourgeois idea – that view of human action and of social relations, particularly of economic exchange – which has molded the modern era for the last 200 years' (1976: p. 7). He interprets the postmodern age much like Toynbee: it represents for him the unleashing of instinct, impulse and will, though, like Steiner, he tends to identify it with the 1960s counterculture (1976: pp. 51f.). For Bell, the postmodern age exhibits an extension of the rebellious, anti-bourgeois, antinomic and hedonistic impulses which he sees as the legacies of the modernist movements in the arts and their bohemian subcultures. He claims that cultural modernism perpetuates hedonism, the lack of social identification and obedience, narcissism, and the withdrawal from status and achievement competition. The postmodern age is thus a product of the application of modernist revolts to everyday life, the extension and living out of a rebellious, hyperindividualist, hedonist lifestyle.

Bell sees contemporary postmodern culture as a radical assault on tradition which is fuelled by an aggressive narcissism that is in profound contradiction with the bureaucratic, technocratic, and organizational imperatives of the capitalist economy and democratic polity. This development, in Bell's view, portends the end of the bourgeois world-view with its rationality, sobriety, and moral

and religious values (1976: pp. 53f.). In response to the corrosive force of postmodernism on traditional values, Bell calls for a revivification of religious values.

Yet as Habermas has argued (1981: p. 14),⁴ Bell tends to blame culture for the ills of the economy and polity, as when he refers to 'cultural crises which beset bourgeois societies and which, in the longer run, devitalize a country, confuse the motivations of individuals, instil a sense of *carpe diem*, and undercut its civic will. The problems are less those of the adequacy of institutions than of the kinds of meanings that sustain a society' (1976: p. 28). Yet in other passages, Bell notes the extent to which the development of the consumer society itself with its emphasis on consumption, instant gratification, easy credit, and hedonism is responsible for the undermining of traditional values and culture and the production of what he calls the 'cultural contradictions of capitalism'. Thus while Mills' (1959) early critique of a postmodern society of cheerful robots derived from a progressive concern with diminution of the ability to shape, control, and change the conditions of society and one's life, Bell's critique derived from fear of the collapse of the bourgeois world-view and its value system.

Our archaeological inquiries have disclosed that there are two conflicting matrices of postmodern discourse in the period before it proliferated in the 1980s. One position – Drucker, Etzioni, Sontag, Hassan, Fiedler, Ferre, and others – gave the term a predominantly positive valence, while others produced negative discourses (e.g. Toynbee, Mills, Bell, Baudrillard). The positive perspective was itself divided into social and cultural wings. The affirmative social discourse (Drucker, Etzioni, Ferre, and theorists of the postindustrial society) reproduced 1950s optimism and the sense that technology and modernization were making possible the break with an obsolete past. These theories replicated the ideologies of the 'affluent society' (Galbraith), 'the end of ideology', and the 'Great American celebration' (Mills) that affirmed contemporary capitalist modernity in the 1950s and 1960s, believing that capitalism had overcome its crisis tendencies and was on the way to producing a 'great society'. The positive culturalist wing (Sontag, Fiedler, Hassan) complemented this celebration by affirming the liberating features of new postmodern cultural forms, pop culture, avant-gardism, and the new postmodern sensibility.

This positive culturalist discourse and the proliferation of post-

modern cultural forms had become the discourse of the postmodern. The cultural discourse had a more radical theory than the sociohistorical one or discussed. The cultural discourse from logical perspectives which emphasized difference, which attacked reason and logic, and the course of the postmodern. The modes of thought (realism, modernism) which later postmodernism attacked.

The negative discourse was a pessimistic take on the trajectory of modernism. Mills, Bell, Steiner, and others saw modernism in decline, threatened by new developments of postmodernism. The discourse of the postmodern civilization at the end of the world, an apocalyptic discourse which was the work of theorists like Baudrillard. The negative discourse of Steiner, Bell and others was a neo-conservative attack on modernism.

Both the positive and negative discourses developed in context with the developments in contemporary culture, viewing them as such a cycle and producing new cultural forms. Its affluent lifestyle. Its commodity spectacles were the adoption of new technologies which would later be termed postmodern. The new diversity and the decay of traditional control. In a sense, the responses to socioeconomic change were the name and sometimes the content of the postmodern.

Thus, by the 1980s, the cultural conservatives and the avant-gardists celebrating the new postmodernism were engaged in a struggle through different discourses, erupting concerning the future of culture.

proliferation of post-

modern cultural forms helped prepare the way for the reception of the discourse of the postmodern in the 1980s. In general, the cultural discourse had a much greater impact on later postmodern theory than the sociohistorical discourses, which were rarely noted or discussed. The cultural discourses also shared certain epistemological perspectives with later postmodern theoretical discourse which emphasized difference, otherness, pleasure, novelty, and attacked reason and hermeneutics. The affirmative social discourse of the postmodern, by contrast, continued the modern modes of thought (reason, totalizations, unification, and so on) which later postmodern theory would assault.

The negative discourses of the postmodern reflected a pessimistic take on the trajectories of modern societies. Toynbee, Mills, Bell, Steiner, and others saw Western societies and culture in decline, threatened by change and instability, as well as by the new developments of mass society and culture. The negative discourse of the postmodern thus posits a crisis for Western civilization at the end of the modern world. This pessimistic and apocalyptic discourse would be reproduced in postmodern theorists like Baudrillard. The negative cultural discourse of Howe, Steiner, Bell and others would also prepare the way for the neo-conservative attacks on contemporary culture in the 1980s.

Both the positive and negative theorists were responding to developments in contemporary capitalism – though rarely conceptualizing them as such – which was going through an expansionist cycle and producing new commodities, abundance, and a more affluent lifestyle. Its advertising, credit plans, media, and commodity spectacles were encouraging gratification, hedonism, and the adoption of new habits, cultural forms, and lifestyles which would later be termed postmodern. Some theorists were celebrating the new diversity and affluence, while others were criticizing the decay of traditional values or increased powers of social control. In a sense, then, the discourses of the postmodern are responses to socioeconomic developments which they sometimes name and sometimes obscure.

Thus, by the 1980s, the postmodern discourses were split into cultural conservatives decrying the new developments and avant-gardists celebrating them. Postmodern discourses were proliferating through different academic fields and by the 1980s debates erupted concerning breaks with modernity, modernism, and

modern theory. More extreme advocates of the postmodern were calling for ruptures with modern discourses and the development of new theories, politics, modes of writing, and values. While the discussions of postmodern cultural forms were primarily initiated in North America, it was in France that Baudrillard and Lyotard were developing notions of a new postmodern era that were much more comprehensive and extreme than those produced earlier in Britain and the United States. The developments in postmodern theory in France constituted a rupture with the French rationalist tradition founded by Descartes and further developed in the French Enlightenment. New French Theory can be read as one of a series of revolts against Cartesian rationalism ranging from the Enlightenment attack on theoretical reason in favour of promoting rational social change, through Comte and Durkheim's revolt against philosophical rationalism in favour of social science, to Sartre and Merleau-Ponty's attempts to make philosophy serve the needs of concrete human existence. As we shall see in the next section, French structuralism, poststructuralism, and postmodern theory constituted a series of attacks on rationalist and Enlightenment theory. Yet these critiques built on another French counter-Enlightenment tradition rooted in the critiques of reason by de Sade, Bataille, Artaud, and others whom Habermas (1987a) terms 'the dark writers of the bourgeoisie'. A French 'dandy' and bohemian tradition stemming from Baudelaire, Rimbaud, and others also helped produce the aestheticized, ironic, and subversive ethos of French postmodern theory. In addition, the French reception of Nietzsche and Heidegger played a major role in turning French theory away from Hegel, Marx, phenomenology and existentialism and toward development of new theoretical formations that eventually produced postmodern theory.

1.2 The French Scene: From Structuralist to Postmodern Theory

While the discourses of the postmodern circulated throughout the world in the 1980s, the most significant developments of postmodern theory have taken place in France and it is upon French postmodern theory that we shall largely focus in this book. As we shall argue in this chapter, a series of socioeconomic, cultural, theoretical, and political events occurred in France which helped give rise to new postmodern theories.

French theories of a rupture were influenced by the rapid modernization following World War II, exciting a new postmodern theory during the 1950s and 1960s. The rupture produced by the May 1968 student and workers' riots appeared to resurrect the political hopes of the 19th century and the impulses of the time war, leading to a fundamental rupture with modernity.

Post-World War II modernity was characterized by a sense of rapid change and modernization emerging. At the end of the 19th century, agricultural and suffering France, as John Ardagh (1982: p. 1) notes, in the mid-1970s 'France was a modern country, its economy turned into a modern one, as material modernization replaced agriculture-based society. Prosperity soared, throwing up some strange and new modes ... Looking back on the past, they now see the modern world - a new world.'

New social theories emerged in response to the change experienced by the modern world. Forms of mass culture, modernized urbanization, highways, drugstores, and mass culture created new social configurations. In the United States as the 'new world' through original theories throughout the West, the ways that mass culture configuration through the new consumption culture of image, spectacle, and pacifying effects masked the continuous rupture. French theories of a postmodern break in history were influenced by the rapid modernization process in France that followed World War II, exciting developments in philosophy and social theory during the 1950s and 1960s, and the dramatic sense of rupture produced by the turbulent events of 1968, in which a student and workers' rebellion brought the country to a standstill, appearing to resurrect French revolutionary traditions. While the political hopes of the day were soon dashed, the apocalyptic impulses of the time were translated into the postmodern theories of a fundamental rupture in history and inauguration of a new era.

Post-World War II modernization processes in France produced a sense of rapid change and a feeling that a new society was emerging. At the end of World War II, France was still largely agricultural and suffered from an antiquated economy and polity. John Ardagh (1982: p. 13) claims that between the early 1950s and mid-1970s 'France went through a spectacular renewal. A stagnant economy turned into one of the world's most dynamic and successful, as material modernization moved along at a hectic pace and an agriculture-based society became mainly an urban and industrial one. Prosperity soared, bringing with it changes in lifestyles, and throwing up some strange conflicts between rooted French habits and new modes . . . Long accused of living with their eyes fixed on the past, they now suddenly opened them to the fact of living in the modern world – and it both thrilled and scared them.'

New social theories emerged to articulate the sense of dynamic change experienced by many in postwar France, analyzing the new forms of mass culture, the consumer society, technology, and modernized urbanization. Throughout France, high-rise buildings, highways, drugstores, shopping centres, consumer goods, and mass culture created dramatic changes in everyday life. The new social configurations were theorized in terms imported from the United States as the 'postindustrial society' (Aron, Touraine) and through original theories that were subsequently highly influential throughout the Western world. Roland Barthes critically dissected the ways that mass culture naturalized and idealized the new social configuration through 'mythologies' which provided propaganda for the new consumer society; Guy Debord attacked the new culture of image, spectacle, and commodities for their stultifying and pacifying effects, claiming that the 'society of the spectacle' masked the continuing reality of alienation and oppression; Baudrillard analyzed the structures, codes, and practices of the consumer

society; and Henri Lefebvre argued that the transformations of everyday life were providing new modes of domination by bureaucracies and consumer capitalism.

In addition, developments in literary and cultural criticism advanced new concepts of writing, theory, and discourse (for example, the 'structuralist revolution', the theories of the *Tel Quel* group, and the development of poststructuralist theory which we discuss below).

The rapid changes in the social and economic spheres were thus paralleled by equally dramatic changes in the world of theory. In postwar France, the intellectual scene had been dominated by Marxism, existentialism, and phenomenology, as well as by attempts to synthesize them (Poster 1975; Descombes 1980). By the 1960s, however, these theories were superseded by the linguistically-oriented discourses of structuralism and Lacanian psychoanalysis which advanced new concepts of language, theory, subjectivity, and society (Jameson 1972; Coward and Ellis 1977; Frank 1989).

Structuralists applied structural-linguistic concepts to the human sciences which they attempted to re-establish on a more rigorous basis. Lévi-Strauss, for instance, applied linguistic analysis to structural studies of mythology, kinship systems, and other anthropological phenomena, while Lacan developed a structural psychoanalysis and Althusser developed a structural Marxism. The structuralist revolution deployed holistic analyses that analyzed phenomena in terms of parts and wholes, defining a structure as the interrelation of parts within a common system. Structures were governed by unconscious codes or rules, as when language constituted meaning through a differential set of binary opposites, or when mythologies codified eating and sexual behaviour according to systems of rules and codes. In Barthes' words (1964: p. 213): 'The aim of all structuralist activity, in the fields of both thought and poetry, is to reconstitute an object, and, by this process, to make known the rules of functioning, or "functions", of this object. The structure is therefore effectively a *simulacrum* of the object which . . . brings out something that remained invisible, or, if you like, unintelligible in the natural object.'

Structural analysis focused on the underlying rules which organized phenomena into a social system, analyzing such things as totemic practices in terms of divisions between the sacred and profane in traditional societies, or cuisine in modern societies in

terms of culinary r coherence, rigour, theories, which wou experiences.

es of the *Tel Quel*
theory which we

terms of culinary rules. Structural analysis aimed at objectivity, coherence, rigour, and truth, and claimed scientific status for its theories, which would be purged of mere subjective valuations and experiences.

The structuralist revolution thus described social phenomena in terms of linguistic and social structures, rules, codes, and systems, while rejecting the humanism which had previously shaped the social and human sciences. Althusser, for example, advocated a theoretical anti-humanism and eliminated human practice and subjectivity from the explanatory scheme of his version of Marxism. The structuralist critique wished to eliminate the concept of the subject which had dominated the philosophical tradition stemming from Descartes through Sartre. The subject was dismissed, or radically decentred, as merely an effect of language, culture, or the unconscious, and denied causal or creative efficacy. Structuralism stressed the derivativeness of subjectivity and meaning in contrast to the primacy of symbolic systems, the unconscious, and social relations. On this model, meaning was not the creation of the transparent intentions of an autonomous subject; the subject itself was constituted by its relations within language, so that subjectivity was seen as a social and linguistic construct. The *parole*, or particular uses of language by individual subjects, was determined by *langue*, the system of language itself.

The new structuralist currents were in part products of a linguistic turn which had roots in the semiotic theory of Ferdinand de Saussure (1857–1913). Arguing that language can be analyzed in terms of its present laws of operation, without reference to its historical properties and evolution, Saussure interpreted the linguistic sign as comprised of two integrally related parts: an acoustic-visual component, the signifier, and a conceptual component, the signified. Language is a 'system of signs that expresses ideas', or signifieds, through differing signifiers that produce meaning. Saussure emphasized two properties of language that are of crucial importance for understanding contemporary theoretical developments. First, he saw that the linguistic sign was arbitrary, that there is no natural link between the signifier and the signified, only a contingent cultural designation. Second, he emphasized that the sign is differential, part of a system of meanings where words acquire significance only by reference to what they are not: 'In language, there are only differences *without positive terms*' (Saussure 1966: p. 120).

As linguist Emile Benveniste and Derrida argued, Saussure nonetheless believed that speech gives presence to the world, that the sign has a natural and immediate relation to its referent, and that the signifier stands in a unitary and stable relationship with the signified (Coward and Ellis 1977; Harland 1987). By contrast, later poststructuralists would emphasize, in a far more radical way than structuralists and semioticians, the arbitrary, differential, and non-referential character of the sign. Indeed poststructural and postmodern theorists would stress the arbitrary and conventional nature of everything social – language, culture, practice, subjectivity, and society itself.

1.2.1 The Poststructuralist Critique

Just as structuralists radically attacked phenomenology, existentialism, and humanism, so too did poststructuralists assault the premises and assumptions of structuralist thought. The poststructuralists attacked the scientific pretensions of structuralism which attempted to create a scientific basis for the study of culture and which strove for the standard modern goals of foundation, truth, objectivity, certainty, and system. Poststructuralists argued as well that structuralist theories did not fully break with humanism since they reproduced the humanist notion of an unchanging human nature. The poststructuralists, by contrast, criticized the claims of structuralists that the mind had an innate, universal structure and that myth and other symbolic forms strove to resolve the invariable contradictions between nature and culture. They favoured instead a thoroughly historical view which sees different forms of consciousness, identities, signification, and so on as historically produced and therefore varying in different historical periods. Thus, while sharing with structuralism a dismissal of the concept of the autonomous subject, poststructuralism stressed the dimensions of history, politics, and everyday life in the contemporary world which tended to be suppressed by the abstractions of the structuralist project.

The critiques of structuralism were articulated in a series of texts by Derrida, Foucault, Kristeva, Lyotard, and Barthes which produced an atmosphere of intense theoretical upheaval that helped to form postmodern theory. Unlike the structuralists who confined the play of language within closed structures of opposi-

tions, the poststructuralists signified, and the language, the instability of representational meaning, signified mind. For poststructuralism, the moment in a new is produced not and object, but signifiers. In Derrida, meaning is infinite signified ... Its which gives sign signifies again and resists imposed structure, and we share Deleuze and Guattari's intensities, Baudrillard's concept of power.

ed structures of opposi-

tions, the poststructuralists gave primacy to the signifier over the signified, and thereby signalled the dynamic productivity of language, the instability of meaning, and a break with conventional representational schemes of meaning. In traditional theories of meaning, signifiers come to rest in the signified of a conscious mind. For poststructuralists, by contrast, the signified is only a moment in a never-ending process of signification where meaning is produced not in a stable, referential relation between subject and object, but only within the infinite, intertextual play of signifiers. In Derrida's words (1973: p.58): 'The meaning of meaning is infinite implication, the indefinite referral of signifier to signified ... Its force is a certain pure and infinite equivocality which gives signified meaning no respite, no rest ... it always signifies again and differs.' This production of signification that resists imposed structural constraints, Derrida terms 'dissemination', and we shall see the same sort of dynamic emphases in Deleuze and Guattari's concept of desire, Lyotard's theory of intensities, Baudrillard's concept of semiurgy, and Foucault's concept of power.

The new theories of language and discourse led to radical critiques of modern philosophy, attacking its root assumptions.⁵ It was claimed that modern philosophy was undermined by its impossible dream of attaining a foundation for knowledge, an absolute bedrock of truth that could serve as the guarantee of philosophical systems (Rorty 1979). Derrida (1976) termed this foundationalist approach to language and knowledge a 'metaphysics of presence' that supposedly guaranteed the subject an unmediated access to reality. He argued that the binary oppositions governing Western philosophy and culture (subject/object, appearance/reality, speech/writing, and so on) work to construct a far-from-innocent hierarchy of values which attempt not only to guarantee truth, but also serve to exclude and devalue allegedly inferior terms or positions. This binary metaphysics thus works to positively position reality over appearance, speech over writing, men over women, or reason over nature, thus positioning negatively the supposedly inferior term.

Many later poststructuralists and postmodern theorists followed Derrida in concluding that a thoroughgoing deconstruction of modern philosophy and a radically new philosophical practice were needed. Precursors of the postmodern critique of philosophy

Derrida argued, Saussure's presence to the world, that relation to its referent, and a stable relationship with the world (1987). By contrast, later poststructuralists, in a far more radical way than Saussure, arbitrary, differential, and indeed poststructural and arbitrary and conventional culture, practice, subject-

phenomenology, existentialism, and poststructuralists assault the very foundations of thought. The poststructuralists of structuralism which sought the study of culture and the goals of foundation, truth, and stability. Poststructuralists argued as well as a break with humanism since the idea of an unchanging human nature. Poststructuralism, criticized the claims of universal structure and sought to resolve the invariability of culture. They favoured a view of culture which sees different forms of culture and so on as historically different historical periods. Poststructuralism dismissed the concept of a stable structure and stressed the dimensions of the contemporary world and the abstractions of the struc-

ture. Poststructuralism articulated in a series of texts by Derrida, Barthes which led to a theoretical upheaval that made the structuralists who sought stable structures of opposi-

tions, the poststructuralists gave primacy to the signifier over the signified, and thereby signalled the dynamic productivity of language, the instability of meaning, and a break with conventional representational schemes of meaning. In traditional theories of meaning, signifiers come to rest in the signified of a conscious mind. For poststructuralists, by contrast, the signified is only a moment in a never-ending process of signification where meaning is produced not in a stable, referential relation between subject and object, but only within the infinite, intertextual play of signifiers. In Derrida's words (1973: p. 58): 'The meaning of meaning is infinite implication, the indefinite referral of signifier to signified ... Its force is a certain pure and infinite equivocality which gives signified meaning no respite, no rest ... it always signifies again and differs.' This production of signification that resists imposed structural constraints, Derrida terms 'dissemination', and we shall see the same sort of dynamic emphases in Deleuze and Guattari's concept of desire, Lyotard's theory of intensities, Baudrillard's concept of semiurgy, and Foucault's concept of power.

The new theories of language and discourse led to radical critiques of modern philosophy, attacking its root assumptions.⁵ It was claimed that modern philosophy was undermined by its impossible dream of attaining a foundation for knowledge, an absolute bedrock of truth that could serve as the guarantee of philosophical systems (Rorty 1979). Derrida (1976) termed this foundationalist approach to language and knowledge a 'metaphysics of presence' that supposedly guaranteed the subject an unmediated access to reality. He argued that the binary oppositions governing Western philosophy and culture (subject/object, appearance/reality, speech/writing, and so on) work to construct a far-from-innocent hierarchy of values which attempt not only to guarantee truth, but also serve to exclude and devalue allegedly inferior terms or positions. This binary metaphysics thus works to positively position reality over appearance, speech over writing, men over women, or reason over nature, thus positioning negatively the supposedly inferior term.

Many later poststructuralists and postmodern theorists followed Derrida in concluding that a thoroughgoing deconstruction of modern philosophy and a radically new philosophical practice were needed. Precursors of the postmodern critique of philosophy

were found in Nietzsche, Heidegger, Wittgenstein, James, and Dewey, and in writers like de Sade, Bataille, and Artaud (Foucault 1973b; Rorty 1979). In particular, Nietzsche's attack on Western philosophy, combined with Heidegger's critique of metaphysics, led many theorists to question the very framework and deep assumptions of philosophy and social theory (Derrida 1976; Vattimo 1985; Dews 1987; Frank 1989 and Ferry and Renault 1990).

Nietzsche took apart the fundamental categories of Western philosophy in a trenchant philosophical critique, which provided the theoretical premises of many poststructuralist and postmodern critiques. He attacked philosophical conceptions of the subject, representation, causality, truth, value, and system, replacing Western philosophy with a perspectivist orientation for which there are no facts, only interpretations, and no objective truths, only the constructs of various individuals or groups. Nietzsche scorned philosophical systems and called for new modes of philosophizing, writing and living. He insisted that all language was metaphorical and that the subject was only a product of language and thought. He attacked the pretensions of reason and defended the desires of the body and the life-enhancing superiority of art over theory.

Both Nietzsche and Heidegger also provided thoroughgoing critiques of modernity that influenced later postmodern theory. Nietzsche saw modernity as an advanced state of decadence in which 'higher types' are levelled by rationalism, liberalism, democracy, and socialism, and where instincts go into steep decline. Heidegger (1977) developed a critique of the modern, representational subject and analyses of the corrosive effects of technology and rationalization. For Heidegger, the triumph of humanism and the project of a rational domination of nature and human beings is the culmination of a process of the 'forgetting of Being' that began with Socrates and Plato. Heidegger undertook to destroy the history of Western metaphysics and called for a new mode of thinking and relating that rejected Western modes of thought in order to attain a more 'primordial' relation to Being. His radical rejection of modernity influenced some postmodern theory, as did his advocacy of premodern modes of thought and experience.

Building on the legacy of Nietzsche and Heidegger, poststructuralists stressed the importance of differences over unities and identities while championing the dissemination of meaning in

opposition to its closure systems. Indeed, later postmodernism saw a collapse of the boundaries (see Derrida 1981b; Rorty 1987b), or between academic fields, and other academic fields. This erosion of boundaries has led to a new, while subverting stand-

opposition to its closure in totalizing, centred theories and sys-
tems. Indeed, later postmodern theory was often to carry through
a collapse of the boundary between philosophy and literary theory
(see Derrida 1981b; Rorty 1979 and 1989; and the critique in Haber-
mas 1987b), or between philosophy, cultural critique, social theory,
and other academic fields. This collapsing, or problematizing, of
boundaries has led to more playful and diverse modes of writing,
while subverting standard academic boundaries and practices.

The intellectual upheavals were soon accompanied by political
upheavals which fostered a further questioning of conventional
assumptions. The events of 1968 and turbulent politics of the period
brought about a return to history and concrete politics. The dramatic
French student strikes in May were followed by a general strike and
the entire country was paralyzed. The upheaval signalled desires for
a radical break with the institutions and politics of the past and
dramatized the failure of liberal institutions to deal with the dissatis-
faction of broad masses of citizens. The student radicals called for
'all power to the imagination' and a complete break from 'papa's'
values and politics. De Gaulle promised new elections and man-
oeuvred many groups and individuals to return to business as
usual; the Communist Party supported this move and attacked the
'student rabble-rousers', thus discrediting their own allegedly revo-
lutionary ambitions and alienating many in the radicalized sectors.

The May 1968 upheaval contributed in significant ways to the
later developments of postmodern theory. The student revolts
politicized the nature of education in the university system and
criticized the production of knowledge as a means of power and
domination. They attacked the university system for its stultifying
bureaucratic nature, its enforced conformity, and its specialized
and compartmentalized knowledges that were irrelevant to real
existence. But the students also analyzed the university as a
microcosm of a repressive capitalist society and turned their
attention to 'the full range of hidden mechanisms through which a
society conveys its knowledge and ensures its survival under the
mask of knowledge: newspapers, television, technical schools, and
the *lycée* [high school]' (Foucault 1977: p. 225). It was through
such struggles as waged by students and workers that Foucault and
others began to theorize the intimate connection between power
and knowledge and to see that power operates in micrological
channels that saturate social and personal existence.

The force of circumstances made it difficult to avoid conceptualizing the constituent role of history in human experience and the exciting political struggles of the day politicized poststructuralist thinkers who feverishly attempted to combine theory and practice, writing and politics. In addition, more attention was paid to subjectivity, difference, and the marginal elements of culture and everyday life. While poststructuralists continued to reject the concept of the spontaneous, rational, autonomous subject developed by Enlightenment thinkers, there was intense debate over how the subject was formed and lived in everyday life, as well as the ubiquity and multiplicity of forms of power in society and everyday life. In particular, attention was focused on the production of the subject through language and systems of meaning and power. Both structuralists and poststructuralists abandon the subject, but, beginning with poststructuralism, a major theoretical concern has been to analyze how individuals are constituted as subjects and given unified identities or subject positions. Lacan, for example, argued that subjectivity emerged in the entrance of the individual into the 'symbolic' of language, while Althusser theorized the 'interpellation' of individuals in ideology, whereby they were called upon to identify with certain subject positions.

Many of the theorists we shall interrogate began to perceive the new social movements emerging in France, the United States, and elsewhere as the most radical political forces and subsequently began to bid adieu to the proletariat and Marxism, embracing micropolitics as the authentic terrain for political struggle. The May 1968 events led many to conclude that Marxism – particularly the version of the French Communist Party – was too dogmatic and narrow a framework to adequately theorize contemporary society and its diverse modes of power. Postmodern theorists were instead drawn to political movements such as feminism, ecology groups, and gay and lesbian formations. These emerged in response to the oppressive effects on social and personal life of capitalism, the state, and pernicious ideologies such as sexism, racism, and homophobia. The new social movements posed a strong challenge to traditional Marxist political conceptions based on the primacy of the labour movement by calling for a more democratic form of political struggle and participation which addresses the multiple sources of power and oppression that are irreducible to the exploitation of labour. difficult to avoid conceptualizing human experience as a politicized poststructuralist project to combine theory and practice. More attention was paid to the cultural elements of culture, and the poststructuralists continued to reject the autonomous subject development. As intense debate over everyday life, as well as the distribution of power in society and the economy, was focused on the production of systems of meaning and the poststructuralists abandon the structuralist paradigm, a major theoretical dualism is constituted as subject positions. Lacan, emerged in the entrance of language, while Althusserians in ideology, whereby to maintain subject positions. They began to perceive the world, the United States, and the forces and subsequently to challenge Marxism, embracing the political struggle. The failure of Marxism – particularly the party – was too dogmatic to theorize contemporary postmodern theorists were such as feminism, ecology, etc. These emerged in residential and personal life of ideologies such as sexism, racism, and social movements posed a political conceptions based on the idea of calling for a more democratic and participation which would end oppression that are in place of the hegemony

of the proletariat, they proposed decentred political alliances. Hence, the new social movements anticipated postmodern principles of decentring and difference and presented important new avenues of politicizing social and cultural relations, in effect redefining the socialist project as that of radical democracy (Laclau and Mouffe 1985).

While the Althusserians were trying to rewrite Marxism as a science by drawing from a structuralist problematic, other French thinkers were gravitating toward Nietzsche as a radical alternative to phenomenology and to Marxism, while attempting to develop a more satisfactory theory of power. Marx's emphasis on the primacy of economic relations of power was replaced with a Nietzschean focus on multiple forms of power and domination. In the aftermath of the failure of 1960s movements and the disenchantment with Marxism another new intellectual movement emerged in the early 1970s: the new philosophers, such as André Glucksman and Henri Bernard-Lévy, who denounced Marxism as a discourse of terror and power. The poststructuralists, while remaining political radicals, tended to include Marxism as a target of attack in their critique of traditional philosophy and social theory which were all accused of resting on obsolete epistemological premises. They positioned their work as a new theoretical avant-garde and claimed as well to advance new political positions congruent with their theories. The poststructuralist critique permeated literary, philosophical, sociological, and political discourse in France and elsewhere during the late 1960s and the 1970s and had a decisive impact on postmodern theory.

1.2.2 The Postmodern Turn

Poststructuralism forms part of the matrix of postmodern theory, and while the theoretical breaks described as postmodern are directly related to poststructuralist critiques, we shall interpret poststructuralism as a subset of a broader range of theoretical, cultural, and social tendencies which constitute postmodern discourses. Thus, in our view, postmodern theory is a more inclusive phenomenon than poststructuralism which we interpret as a critique of modern theory and a production of new models of thought, writing, and subjectivity, some of which are later taken up by postmodern theory. Indeed, postmodern theory appropriates

the poststructuralist critique of modern theory, radicalizes it, and extends it to new theoretical fields. And in the political arena, most poststructuralist and postmodernist theory takes up post-Marxist positions which claim that Marxism is an obsolete or oppressive discourse that is no longer relevant for the current era.

The discourse of the postmodern also encompasses a socio-historical theory of postmodernity and analysis of new postmodern cultural forms and experiences. The cultural analysis is influenced by poststructuralist discussions of modernism and the avant-garde by Barthes, Kristeva, Sollers, and others associated with the *Tel Quel* group, but the later postmodern socio-historical discourses develop more comprehensive perspectives on society, politics, and history. On the other hand, most of the individuals that we discuss in this book can be considered as either postmodern or poststructuralist theorists, but our focus will be on the ways in which they deal, in one way or another, with what we shall define as postmodern positions towards theory, society, history, politics, and culture.

Postmodern theory generally follows poststructuralist theory in the primacy given to discourse theory. Both structuralists and poststructuralists developed theories which analyzed culture and society in terms of sign systems and their codes and discourses. Discourse theory sees all social phenomena as structured semiotically by codes and rules, and therefore amenable to linguistic analysis, utilizing the model of signification and signifying practices. Discourse theorists argue that meaning is not simply given, but is socially constructed across a number of institutional sites and practices. Hence, discourse theorists emphasize the material and heterogeneous nature of discourse (see Pecheux 1982). For Foucault and others, an important concern of discourse theory is to analyze the institutional bases of discourse, the viewpoints and positions from which people speak, and the power relations these allow and presuppose. Discourse theory also interprets discourse as a site and object of struggle where different groups strive for hegemony and the production of meaning and ideology.

Discourse theory can be read as a variant of semiotics which develops the earlier project of analyzing society in terms of systems of signs and sign systems. Saussure had proposed developing a semiotics of 'the life of signs in society' and Barthes, the early Baudrillard, and others followed through on this to analyze the semiotics of myth, culture, consumption, and other social activi-

ties. Eventually, assumed the previous much postmodern it is language, sign organize the psycho modern theorists reduce everything instance, defines 'a thoroughly he institutions, are administrative moral and philanth as the unsaid' (comes close to p constitutes all so sive material co toward analysis analysis of disco traps of linguisti

ssure had proposed develop-
ociety' and Barthes, the early
rough on this to analyze the
tion, and other social activi-

ties. Eventually, however, discourse theory superseded and sub-
sumed the previous semiological theories, and we shall see that
much postmodern theory follows discourse theory in assuming that
it is language, signs, images, codes, and signifying systems which
organize the psyche, society, and everyday life. Yet most post-
modern theorists are not linguistic idealists or pan-textualists, who
reduce everything to discourse or textuality.⁶ Foucault, for
instance, defines the apparatus that constitutes the social body as
'a thoroughly heterogeneous ensemble consisting of discourses,
institutions, architectural forms, regulatory decisions, laws,
administrative measures, scientific statements, philosophical,
moral and philanthropic propositions – in short, the said as much
as the unsaid' (1980a: p. 194). While some postmodern theory
comes close to positing a linguistic idealism, whereby discourse
constitutes all social phenomena, or is privileged over extra-discur-
sive material conditions, there are also countervailing tendencies
toward analysis of the pragmatics of language use, materialist
analysis of discourses, institutions, and practices which avoid the
traps of linguistic idealism.

By the 1970s, French theorists were attacking modern theories
rooted in humanist assumptions and Enlightenment rationalist
discourses. Foucault (1973a, 1980a, 1982a and 1982b) proclaimed
the 'death of man' while advancing new conceptions of theory,
politics, and ethics. Baudrillard (1983a and 1983b) describes the
implications for a theory and politics of a postmodern society in
which 'radical semiurgy', the constantly accelerating proliferation
of signs, produces simulations that create new forms of society,
culture, experience, and subjectivity. Lyotard (1984a) describes a
'postmodern condition' that marks the end of the grand narratives
and hopes of modernity and the impossibility of continuing with
the totalizing social theories and revolutionary politics of the past.
Deleuze and Guattari (1983 and 1987) propose developing a
'schizoanalysis' and 'rhizomatics' which maps the repressive 'terri-
torializations' of desire throughout society and everyday life while
seeking possible 'lines of escape'. And Laclau and Mouffe (1985)
develop radical democratic political theories based on post-
structuralist epistemology and a critique of modern political
theory, including Marxism.

Postmodern theory, however, is not merely a French phenome-
non but has attained international scope. This is fitting because, as

noted, German thinkers like Nietzsche and Heidegger already began the attack on traditional concepts and modes of philosophy. The American philosopher William James championed a radical pluralism and John Dewey attacked most of the presuppositions of traditional philosophy and social theory, while calling for their reconstruction. Furthermore, it was the English historians Toynbee and Barraclough and North American social theorists such as Drucker, Mills, Etzioni, and Bell who introduced the concept of a postmodern age in history and social theory, while North American cultural theorists introduced the term in the arts. It has indeed been in the English-speaking world that interest in all facets of the postmodern controversies has been most intense with conferences, journals, and publishing lists proliferating in these countries. In particular, the debates over postmodernity have been intense in the United States, England, Canada, and Australia.

Thus, a diversity of theoretical and political responses and strategies have emerged in the postmodern debates. They took on an international scope and resonance by the 1980s and have penetrated every academic field, challenging regnant orthodoxies and affirming new postmodern perspectives and positions. One even finds a postmodern turn in the field of science where 'postmodern science' refers to a break with Newtonian determinism, Cartesian dualism, and representational epistemology. Advocates of postmodern science embrace principles of chaos, indeterminacy, and hermeneutics, with some calling for a 're-enchantment of nature' (see Prigogine and Stengers 1984; Griffin 1988a and 1988b; and Best 1991a). Postmodern discourse has even penetrated mass culture with frequent articles on such disparate topics as the postmodern presidency, postmodern love, postmodern management, postmodern theology, the postmodern mind, and postmodern television shows like MTV or *Max Headroom*. During the 1980s and 1990s, lines are being drawn between those who aggressively promote the discourse of the postmodern, those who reject or ignore it, and those who strategically deploy postmodern positions with previous modern positions to develop new syntheses and theories. In this book, we shall enter into these debates and indicate what is at stake for critical theory and radical politics.⁶

1.3 Critical Theory and the Postmodern Challenge

Postmodern discourses thus denote new artistic, cultural, or theoretical perspectives which renounce modern discourses and practices. All of these 'post' terms function as sequential markers, designating that which follows and comes after the modern. The discourse of the postmodern thus involves periodizing terms which describe a set of key changes in history, society, culture, and thought. The confusion involved in the discourse of the postmodern results from its usage in different fields and disciplines and the fact that most theorists and commentators on postmodern discourse provide definitions and conceptualizations that are frequently at odds with each other and usually inadequately theorized. Moreover, some theorists and commentators use the term postmodern descriptively to describe new phenomena, while others use it prescriptively, urging the adoption of new theoretical, cultural, and political discourses and practices.

There is, in fact, an ambiguity inherent in the word 'post' which is played out in various postmodern discourses. On the one hand, 'post' describes a 'not' modern that can be read as an active term of negation which attempts to move beyond the modern era and its theoretical and cultural practices. Thus, postmodern discourses and practices are frequently characterized as anti-modern interventions which explicitly break with modern ideologies, styles, and practices that many postmodernists see as oppressive or exhausted. The prefix 'post', in this prescriptive sense, signifies an active rupture (*coupure*) with what preceded it. As we have noted, this rupture can be interpreted positively as a liberation from old constraining and oppressive conditions (Vattimo 1985) and as an affirmation of new developments, a moving into new terrains, a forging of new discourses and ideas (Foucault 1973b; Deleuze and Guattari 1983 and 1987; Lyotard 1984a). Or the new postmodernity can be interpreted negatively as a deplorable regression, as a loss of traditional values, certainties, and stabilities (Toynbee 1963a and 1963b; Bell 1976), or as a surrender of those still valuable elements of modernity (Habermas 1981 and 1987a).

On the other hand, the 'post' in postmodern also signifies a dependence on, a continuity with, that which it follows, leading some critics to conceptualize the postmodern as merely an intensi-

fication of the modern, as a hypermodernity (Merquior 1986; During 1987), a new 'face of modernity' (Calinescu 1987), or a 'postmodern' development within modernity (Welsch 1988). Yet many postmodern theorists deploy the term – as it was introduced by Toynbee – to characterize a dramatic rupture or break in Western history. The discourses of the postmodern therefore presuppose a sense of an ending, the advent of something new, and the demand that we must develop new categories, theories, and methods to explore and conceptualize this novum, this novel social and cultural situation. Thus, there is an intrinsic pathos of the new which characterizes the discourses of the postmodern and its celebrants tend to position themselves as theoretical and political avant-gardes (just as 'modern' theorists did in an earlier era).

We will therefore use the term 'postmodernist' to describe the avatars of the postmodern within the fields of philosophy, cultural theory, and social theory. A postmodernist describes and usually champions imputed breaks in knowledge, culture, and society, frequently attacking the modern while identifying with what they tout as new and 'radical' postmodern discourses and practices. A postmodernist thus calls for new categories, modes of thought and writing, and values and politics to overcome the deficiencies of modern discourses and practices. Some postmodern theorists, like Lyotard and Foucault, focus on developing alternative modes of knowledge and discourse, while others, like Baudrillard, Jameson, and Harvey emphasize the forms of economy, society, culture, and experience. Within social theory, a postmodernist claims that there are fundamental changes in society and history which require new theories and conceptions, and that modern theories are unable to illuminate these changes. Jameson, however, utilizes modern (primarily Marxist) theory to analyze postmodern cultural and social forms, while Habermas and many of his associates criticize what they consider to be the ideological nature of postmodern theory *tout court*. Laclau and Mouffe, by contrast, use postmodern critiques to go beyond Marxism and to reconstruct the project of radical democracy.

Thus not everyone we discuss in this book is a full-blown postmodernist. Foucault eschews all labelling procedures and never identified with postmodern theory or used the term in any substantive way; moreover, in his later work Foucault sometimes

aligned his work with specified both contemporary and the era which explicitly adopt the present new model they counterpose a Baudrillard was at t to describe his work his own positions. label and Guattari remain wedded to continues to identify

is book is a full-blown belling procedures and or used the term in any ork Foucault sometimes

aligned his work with aspects of the Enlightenment tradition and specified both continuities and discontinuities between modernity and the era which followed it. Deleuze and Guattari do not explicitly adopt the discourse of the postmodern, but they do present new models of theory, practice, and subjectivity which they counterpose and offer as alternatives to modern models. Baudrillard was at first reluctant to embrace the term postmodern to describe his work, but he now uses it upon occasion to identify his own positions. Lyotard has expressed ambivalence toward the label and Guattari has attacked it, while Laclau and Mouffe remain wedded to many modern political values and Jameson continues to identify with Marxism.

In the following chapters, we attempt to provide comprehensive explications and critiques of postmodern theory, exploring a variety of postmodern positions and perspectives. Yet we exclude systematic discussion of such major poststructuralist theorists as Derrida, Kristeva, Barthes, or Lacan who are often linked to postmodern theory. While their work can be articulated with social and political theory – as Ryan (1982) and Spivak (1987) have shown – the main focus of most poststructuralist theory is on philosophy, cultural theory, or psychoanalysis, and poststructuralist theory does not provide an account of postmodernity or intervene in the postmodern debates. Our book, by contrast, will focus on the theories of history, society, culture, and politics by theorists who we believe contribute most to developing postmodern theory, even if they do not explicitly describe themselves as postmodernists.

Thus, we shall discuss the opposing positions concerning whether we are or are not in a new postmodern age or are still within modernity, and whether modern theory does or does not have the resources to deal with the problems of the present age. We will not, however, do a sociological analysis of postmodernity in this book, nor do we assume that there is a postmodern society, culture, and experience out there waiting to be described. Instead, this text will be primarily a theoretical work dealing with postmodern theories and is not another account of the 'post-modern condition'. Our task will be to assess the extent to which postmodern theories contribute to the project of developing a critical theory and radical politics for the present age. We shall assess the contributions and limitations of the theories under

interrogation as to whether they do or do not contribute salient critiques of modernity and modern theory, useful postmodern theories, methods, modes of writing, and cultural criticism, and a new postmodern politics.

In each study of various postmodern theorists, we shall examine how they: (1) characterize and criticize modernity and its discourses; (2) postulate a break with modernity and modern theory; (3) produce alternative postmodern theories, positions, or perspectives; (4) create, or fail to create, a theory of postmodernity; and (5) provide, or fail to develop, a new postmodern politics adequate to the supposed postmodern situation. We shall compare and contrast the various critiques of modernity, the characterizations of the basic trends of postmodern culture or postmodernity, and the development of postmodern theories in Foucault, Deleuze and Guattari, Baudrillard, Lyotard, Jameson, Laclau and Mouffe. We examine some recent configurations of feminism and postmodernism, as well as the ways that the earlier generation of the Frankfurt School, especially Adorno, anticipated certain trends of postmodern theory. We also inquire into why Habermas and the current generation of critical theorists have for the most part rejected postmodern theory as a species of irrationalism.

We shall delineate our own theoretical perspectives as we proceed and will elaborate our theoretical and political positions in more detail in the conclusion. Our project therefore is to interpret and come to terms with postmodern theory as a challenge to modern theory and politics which contains both promising new perspectives and problematical aspects. We do not ourselves accept the postmodern postulate of a radical rupture or break in history which requires totally new theories and modes of thought. Yet we recognize important changes in vast domains of society and culture which require a reconstruction of social and cultural theory, and which sometimes warrant the term 'postmodern' in theory, the arts, society, and politics. Likewise, we accept some aspects of the postmodern critique of modernity and its theories, but are not ready either to throw out all the theories and methods of the past or to renounce modernity altogether. We shall neither be apologists and celebrants of the discourse of the postmodern, nor shall we be merely dismissive. Instead, we shall be open to its challenges and critiques, while sceptical of some of its exaggerations and rhetoric.

Notes

1. For previous discussion: *New German Critique* 33 (1987); *Communication Inquiry* 10/87; *Screen* 28/2 (1987); *Society and Society* (1988); *Polygraph*. See also our own previous work and the essays in Turner 1989.
2. On the distinction between arts and for surveys of difference: 1983; Trachtenberg 1985; 1989. It should be noted that modernism is, whether positivist or a development within the defining features of postmodernity.
3. We are aware that some follow positivist correspondence as 'covering devices' or 'pictures' as mere heuristic devices for reality. Yet much modern science, representation, and postmodern critique. Some elements of the postmodern or postmodern perspectives on reality.
4. Habermas also projects organization in *Legitimation* behind the examination of class societies is in exploring that is, a historically new name for the surprising view never really undertaken and has generally treated postmodernity point that we take up in Chapter 5.
5. On discourse theory: 1986. Callinicos (1985: p. 8) idealism he finds in postmodernity reduces everything to text, what he calls worldly postmodernity, the discursive and denies us the possibility of postmodern theory which sometimes comes close to reality.
6. We are using 'critical' social and cultural theory, critical theory of society, project we discuss in Chapter 5.

Notes

1. For previous discussions of postmodern theory, see the articles in *New German Critique* 33 (1984); *Minnesota Review* 23 (1984); *Journal of Communication Inquiry* 10/2 (Summer 1986); *Cultural Critique* 5 (1986–87); *Screen* 28/2 (1987); *Social Text* 18 (Winter 1987–88); *Theory, Culture and Society* (1988); *Polygraph* 2/3 (1989) and *Thesis Eleven* 23 (1989). See also our own previous writings on the topic listed in the bibliography and the essays in Turner 1990; and Dickens and Fontana 1991.

2. On the distinction between modernism and postmodernism in the arts and for surveys of different forms of postmodern culture, see Foster 1983; Trachtenberg 1985; Kearney 1988; Conner 1989; and Hutcheon 1989. It should be noted that there is an ongoing debate over what modernism is, whether postmodernism constitutes a decisive break with it, or a development within it. Nor is there agreement concerning what are the defining features of postmodernism as a mode of culture.

3. We are aware that some versions of modern social theory do not follow positivist correspondence theories of truth or interpret categories as 'covering devices' or 'pictures' of social reality, instead using categories as mere heuristic devices or ideal types to interpret a complex social reality. Yet much modern theory follows Enlightenment models of science, representation, and totality, and is thus vulnerable to the postmodern critique. Some modern theory, however, anticipated elements of the postmodern critique of modern theory, as well as some of the postmodern perspectives on society; see Antonio and Kellner 1991.

4. Habermas also projected the possibility of a postmodern social organization in *Legitimation Crisis* (1975: p. 17), writing: 'The interest behind the examination of crisis tendencies in late- and post-capitalist class societies is in exploring the possibilities of a "post-modern" society – that is, a historically new principle of organization and not a different name for the surprising vigor of an aged capitalism.' Yet Habermas has never really undertaken an inquiry into what might follow modernity and has generally treated postmodern theories as irrationalist ideologies – a point that we take up in Chapter 7.

5. On discourse theory, see Coward and Ellis 1977 and Macdonell 1986. Callinicos (1985: p. 86f.) distinguishes between a version of linguistic idealism he finds in poststructuralism which he terms textualism (that reduces everything to textuality, to discursive formations), contrasted to what he calls worldly poststructuralism that articulates the said and the unsaid, the discursive and the non-discursive. 'Textualism, however, denies us the possibility of ever escaping the discursive.' Most of the postmodern theory which we shall examine is worldly in this sense, but sometimes comes close to discursive reductionism, or textualism.

6. We are using 'critical theory' here in the general sense of critical social and cultural theory and not in the specific sense that refers to the critical theory of society developed by the Frankfurt School, whose project we discuss in Chapter 7.
