

Online safety is crucial for own protection.

Here are the main reasons why!

BASIC DIGITAL SAFETY

How to stay safe and protected online

01

Passwords:

create difficult passwords that others won't be able to guess. you can use password managers to help you remember. Another useful tip is to include small and capital letters but also numbers throughout your password

02

Anti-viruses and VPNs:

these are important for protecting your data and details from untrustful sites that might steal your personal data. these add another layer of protection to your digital safety

03

Backing up data:

you can do this to ensure all your data such as documents, photos, personal information and details are not lost. you can do this by downloading them on a hard drive such as a usb stick

04

2 factor authentication:

for extra security you can turn the 2FA on. This basically means having a second password or code for self verification to reduce the risk of someone else gaining access
