

Basic Digital Safety

Don't share personal data:

- bank accounts detail;
- passwords;
- sort cods, secret data and links.

Protecting
your personal
data

All family members should know what kind of information is possible to posted online. Any online comment or image may stay in internet forever. To be Internet smart, you need to share with caution.

Be Careful
What You
Posting and
sharing

All your smart devises critically need to be protected. You have to update not only your operating system, programs and apps as well as antivirus software. It saves you from unpredicted virus and digital problem.

Be calm with
Antivirus
Program.

It is very good idea to understand who is your internet partner. Using VPN connection helps to feel safety during online working. Time to time you should turn your device off

Be gingerly
Online

The main task of cybercriminals to find gap in security system. People like to create and use easy passwords. To protect your data it necessary to generate unique password.

It is nessesery
to use
powerful
Password.

All devices of your family should be protected with anti-virus anti-spyware programms. Some unplesent virus programm able to blok your computer anytime. Making copy of your data regulary avoids to loze important information. Your children should be confident and safe in the internet.

Making
Backup
often
