

An Abstract:

The soundwalk we made takes you around different areas of Swansea, showcasing the “rise of the machines” we tried showing this in both the locations we chose and sounds and compositions we created.

We did this by starting out in more natural places and then moving on to locations that have more technology at their heart. We also added more and more technology and AI in the sound of our music as the walk went on.

The soundwalk:

The Design Thinking process:

The design thinking process is a way of problem solving/approaching a task and it includes five stages. These five stages include:

Empathise, which requires the subject to try to analyse and understand the problem.

Define, which lead on from the previous stage, helping define an actual goal to achieve.

Ideate, which is a stage about coming up with ways to achieve the goal set previously.

Prototype, which is a stage of quickly trying the ideas formed, seeing how they work.

Test, which is where the prototypes are tested and reflected on finding the best one.

Any of these stages can be repeated any number of times.
