

HTML Editor Shortcut Keys

The following features are accessible through shortcut keys:

Ctrl-O	Change the font
Ctrl-P	Change the font size
Ctrl-H	Change text format (headings etc.)
Ctrl-1 to Ctrl-6	Change heading level
Ctrl=	Change text language for screen readers, or specify language for the Multilang filter (these appear after the 'Multi' option in the dropdown).
Ctrl-B	Make text bold
Ctrl-I	Make text italic
Ctrl-U	Underline text
Ctrl-S	Strikethrough text
Ctrl-,	Subscript
Ctrl-.	Superscript
Ctrl-0	Clean Word HTML
Ctrl-Z	Undo
Ctrl-Y	Redo
Ctrl-L	Justify left
Ctrl-E	Center
Ctrl-J	Justify full
Ctrl-/	Text runs left to right
Ctrl-	Text runs right to left
Ctrl-;	Decrease indent
Ctrl-'	Increase indent
Ctrl-G	Change text colour
Ctrl-K	Change background colour
Ctrl-F	Search and replace
Ctrl-`	Switch to HTML source code view
Ctrl-M	Toggle fullscreen editor mode
Ctrl-Alt-O	Insert ordered list
Ctrl-Alt-U	Insert unordered list
Ctrl-Alt-R	Insert horizontal rule
Ctrl-Alt-A	Create anchor
Ctrl-Alt-L	Create link
Ctrl-Alt-D	Unlink
Ctrl-Alt-N	Turn off autolinking

Ctrl-Alt-I	Insert image
Ctrl-Alt-T	Insert table
Ctrl-Alt-S	Insert emoticon
Ctrl-Alt-C	Insert special character

Current limitations:

- We cannot currently use the Ctrl-` shortcut to toggle back from HTML source code view to WYSIWYG view.
- There are no shortcuts for table operations (only available in fullscreen editor mode). These are not keyboard-friendly anyway as they depend on mouse usage for the selection of table cells to operate on.
