Introduction

This poster examines the key aspects of workforce shortages in the NHS, emphasising the importance and rationale behind the research. It focuses on understanding the issue by exploring its causes, implications, and potential solutions. The aim is to contribute to a broader understanding of the topic.

Research methods

Quantitative methods are ideal for this research, as they analyse numerical data to uncover patterns and trends. These techniques are commonly used to study workforce shortages in the NHS, focusing on data collection and analysis to identify key relationships.

Data Collection

1. Identify reputable sources to ensure research integrity. 2. Assess data quality for accuracy and reliability. 3. Extract data relevant to your research objectives. 4. Use appropriate statistical methods for effective analysis. 5. Properly reference all sources to maintain credibility.

Research strategy

The research strategy articulates a comprehensive plan for effectively conducting the investigation, ensuring that we thoroughly address and answer the research question.

Research Methodology

The research will employ a robust quantitative approach, drawing on comprehensive data collected through surveys and NHS statistics. This method will concentrate on critical aspects such as waiting times, staffing levels, and patient outcomes, aiming to provide a clear and compelling analysis of the current healthcare landscape.

Literature review

Workforce shortages in the NHS are a critical challenge for healthcare delivery. Buchan and Charlesworth (2019) highlight that these shortages increase staff workloads and stress, jeopardising patient care. The King's Fund (2022) adds that they lead to longer waiting times and limited access to services, worsening health inequalities. Addressing these issues is essential for a more effective and equitable healthcare system.

Conclusion

This research will analyse secondary data to assess the NHS workforce's impact on patient care. Using a quantitative approach and correlational analysis, we aim to uncover key patterns and insights for improving future healthcare practices..
