

Stringed Egyptian Amulets

Figure 1. String of amulet and beads. Hann 2023

Object Number:
CCM311.004
Dimensions: 1-2cm
Materials: Faience & steatite
Providence: Unknown

Figure 2. String of amulets and beads with scale. Hann 2023

The string has a small collection of Egyptian 7 amulets and 4 beads that are made from faience and steatite. The collection consists of an Isis Figurine, a scarab, a lotus flower, a column and 3 Uzet eye amulets.

The artifact is part of Major Harry Hartley Southey's Egyptian collection.

The providence is unknown due to Major Southey not keeping detailed records.

Figure 3. Broad collar of Senebtisi. The Met Museum 2018

It is thought that the amulets on the artifact were part of a Usekh broad collar pictured in figure three or beaded collar like the collars pictured in figure six.

Figure 4 (above). Damaged scarab amulet. Hann 2023

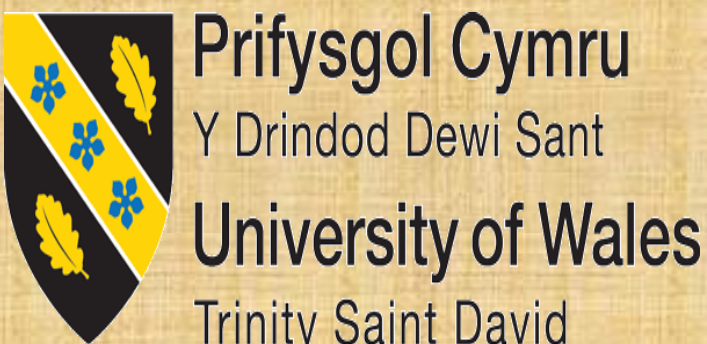

Figure 5 (below). Damaged Isis figurine amulet. Hann 2023

Figure 6 (below). Anubis amulets on beaded collar. The

Whilst some of the items are intact; the lotus flower, one of the eyes and beads to be precise, the majority of the amulets in this artifact have been damaged: the blue Scarab has broken in half, the figurine's head and body has broken off, only the top of the column survives, the other two have broken in multiple places.
