

In my opinion both of these proposed exhibits aid the application of British heritage. With the VR exhibit it allows for the user to be ~~transported~~ transported back in time to see how the Welsh miners worked and what the conditions were like. As well as this further development of this idea could be carried out to turn it into a 4D experience. Including smells, and things for the user to touch when in the VR experience to bring them back to the time period in a more accurate way. The AR exhibit allows for the user to be able to learn about ~~exhibits~~ objects and ~~rooms~~ rooms that have historical importance and to witness events, giving them further information and ~~an interesting~~ an interesting way to learn this information.
