

Essay - Artificial Intelligence (AI) in Academia

Artificial Intelligence is known as AI, and it is a helpful device in a way that enables students to use in educational purposes and very popular technology for studying because it gives answers to your questions without researching, AI helps students at their own pace making them less stressful for them however I think it's good and bad at the same time for example; if you are unsure about a question you can ask AI to explain for you without you even trying which I think is beneficial because some people can't understand the topic properly however the bad thing is, AI can be not always biased because for example; if you ask AI facts some of them might not be true due to plagiarism as I said it can also be plagiarism it can impact the students career and work environment. Also, AI has amazing tools such as ChatGPT, Grammarly, Plagiarism device detector

AI is rapidly used in ChatGPT the main advantage of ChatGPT is that it can assist students in understanding challenging difficult topic, ChatGPT can come up with ideas or professional suggestions and so many resources that can help students with their work for example it generate ideas for businesses to resolve problems and it can also write your own essay, what I mean is if you're struggling as a company ChatGPT can significantly help your company in various ways such as customer support by answering frequently asked questions and improving response times much quicker and effectively. But I personally think ChatGPT can be good to be used on education and company as it offers help from giving an AI question and it will answer it for you depending on what topic you have. AI is transforming education and business, with ChatGPT at the forefront. Its key advantage lies in helping students grasp challenging subjects by generating ideas and providing valuable insights, whether for brainstorming business solutions or crafting essays. For businesses, ChatGPT is a game changer in

customer support, efficiently addressing frequently asked questions and improving response times. I believe ChatGPT holds tremendous potential in both educational and corporate settings, revolutionizing how we tackle learning and problem-solving. “ChatGPT can assist with typical enquiries and commonly asked questions from clients, increasing customer satisfaction and response times.” Niraj (2024) 13 Feb. 2025.

Grammarly is a handy writing tool that helps you catch grammar, spelling, and punctuation errors to make sure everything's correct. It's great for polishing up your essays, emails, and reports, which is super useful for your career. Not only does it fix spelling mistakes, but it also suggests better word choices and sentence structures, making your writing clearer and more professional. I think that Grammarly is perfect tool because it gives you very clear communication for example; like I said not only it improves emails, reports and essays it can also make your life easier with stress-free and it is also essential resource for many professionals out there as it can quickly adapt written communication and business itself. For example, I have used Grammarly in past it has help me through a lot as I missed out on some spelling mistakes and written communication which has taught me how to use them correctly. “Grammarly is an amazing editing program.” Chesson, (2020)

Plagiarism detector software is a program that compares a given text to a database of sources of information such as, website like Turnitin, Grammarly, other documents to look for copied or plagiarised information by focusing on similarities text and pervious published works, plagiarism detection tools are really helpful for spotting instances of plagiarism, whether someone did it on purpose or by mistake. I think using these tools is a great idea because they promote honesty and professionalism in writing. They also protect authors' rights by helping them find out if their work has been copied without permission. Plus, using plagiarism detection helps ensure that everything we write is clean and error-free, which is important for keeping a professional image. For example, if someone removes watermarks from copyrighted images, they could end up selling an image without knowing the original author's rights. “A plagiarism checker uses high-end database software to search for matches between your text and existing texts.” Tegan, and Caulfield,(2021)

In inclusion the evidence clearly supports that the idea of using AI in academics is good because it shows all these technologies tools helping businesses and academic that they use, and it offers a writing support and learning outcomes. “AI systems can adjust the curriculum to make sure optimal studying outcomes for each student” Guerra, (2023)
