

BASIC DIGITAL SAFETY

S

PASSWORD SECURITY

the best thing to do when it comes to password security is to make sure you create a strong password, as well as a unique password for each social media account you make. using a two-factor authentication will also help.

M

ONLINE PRIVACY

for online privacy you have to be mindful of all the things you post and share on social media, you can do things like taking control of who you want to view your profile, and even all the way down to who you want to message you.

A

RECOGNISING SCAMS

There's many different ways of recognising scams, the most important thing to do is to just be cautious of websites and other pop ups that don't look legit or don't look like it belongs there. there's also visual's such as phishing hook or a scam alert symbols, these can help you detect scams.

R

SAFE INTERNET BROWSING HABITS

the best thing to do is to stay clear of websites that don't look too familiar to you. another thing is that when your downloading things be cautious of what your downloading.

T

SOCIAL MEDIA ETIQUETTE

with social media etiquette you just have to be careful what you post, what you send around and you save to your phone. and you have to make sure you stay within the guideline's of any social media apps you use this is why it is important
