68/100

GENERAL COMMENTS

Instructor

Great array of work here Ava. Some high quality pieces and showing great promise with the compositing work.

Some 3D work which is great to see this early on, the fact that you are exploring these programs at this point is great. Well done.

Sound fundamental art principles with perspective work and layering. Good job.

I'd liked to have seen more anatomy work overall with potentially a few different subjects. (Potentially a masculine character in an A-Pose?)

Copper Robot is a nice piece, showing iterations and progression with the pencil drawn and final painted piece. Design has been adapted well from a pre-existing idea (Valorant).

Lava Gun is a very interesting concept and laid out in a way that it would make sense to a modeller/someone working on mechanics further down the line. I'd love to see more stuff like this in your future work, potentially a bit more polished. Never hesitate to put little notes detailing parts/elements and present the design in a way that it can make sense to both the audience and a modeler. Great job.
